Description

Reviews (1)

- Stereo Sound: Dynamic speaker systems create powerful, bass driven stereo sound; Hear music that stays true to the original recording with high resolution audio; The B750s in ear headphones maintains drive force for deep bass and clear mids
- Noise Isolation: Get the most from your wired earphones everywhere with optimised noise isolation earbuds; They also allow you to listen to your tracks at much lower and safer volumes; Enjoy full and high detailed mid to low frequency performance
- Superior Design: The various sizes of ear bud tips provided in the package allow for a personalised fit as well as a high passive attenuation of ambient noise; Also, the flat cable design ensures high wearing comfort as you listen to your tracks
- Heavy Bass: Beat Response technology delivers a tight, deep bass response, perfect for low end focused music; An acoustic port controls air flow for the low frequency range, optimising diaphragm movement for an accurate reproduction of bass
