Distributed cloud services — solve the most pressing challenges of app delivery

We help DevOps and NetOps teams ease their operational, security, and performance challenges as their apps and data get distributed across cloud or edge

Volterra Offerings

Volterra provides a distributed cloud platform to deploy, connect, secure and operate apps and data across multiple clouds and edge sites.

Our global app-to-app network allows you to secure cloud apps and offload the most critical workloads closer to end users for extreme performance

Navigate the transition to multi-cloud and distributed edge, while simplifying the deployment, security, and operations of your applications and infrastructure

Multi-cloud

Network Cloud

Edge Cloud

Multi-Cloud

Provide consistent services and security across multiple public and/or private clouds:

[Consolidate networking, security, and application delivery across cloud providers](#) →

[Advanced Kubernetes gateway with integrated security and API services across one or multiple clusters](#) →

[Globally distributed app gateway to deliver very high performance SaaS apps](#) →

 SoftBank

“We are excited to work with Volterra to architect an unprecedented edge computing environment across our 5G network. Volterra has demonstrated that it solves critical operational challenges within existing telco cloud service offerings, increasing operator efficiency and revenue streams while delivering a cloud-native experience that will drive developer adoption.”
