

THE MORE AFFORDABLE WAY TO GYRO!

We are proud to introduce the all new TANGO gyroplanes. These machines are fast, fun and nimble and are a great starting point on the road to flight. They're light weight and responsive to control inputs yet very stable in flight. They are also comfortable giving the pilot and passenger the ability to enjoy their flight for a longer duration and a large capacity fuel tank helps. The patented extruded solid aluminum rotor blades are strong yet flexible in all the right places and with a wide chord, provide fantastic amounts of lift.

With TANGOGYRO, you will never have to settle.

These are inexpensive to own and operate. On average, you can own a TANGO gyroplane for less then the cost of a new aircraft engine. but economy doesn't mean you have to sacrifice the quality and value.

We will help you create the gyro you'll want to fly. Want bush tires? Want snow skis? Want to use it for work or just to have fun? NO PROBLEM. We have the ability to accommodate just about any additional changes.
