Note: [Wide compatibility]: Compatible with Samsung S9/S9 Plus/S8/S8 Plus, Macbook 2017/2016, Macbook Pro, iMac 2017, Google Chromebook Pixel, Samsung Galaxy Tab S3, Dell XPS 13/15, Lenovo Yoga 900/ 910, Huawei Matebook, Google Pixel XL, 2, 2XL, LG G5, G6, V20, V30, Nexus 5X/Nexus 6P, Microsoft Lumia 8.5, Mac 8.5, Mac 6P, Mac 6P, Microsoft Lumia and Windows Windows Plus (Note: The card reader is not compatible with iPhone or iPad.)

2. [Save device space]: Connect SD card readers and C-port mobile devices that support USB mobile devices (USB OTG). Play video/music directly from external memory without taking up device space. The USB memory card reader supports SD/Micro SD cards up to 128G, allowing ultra-fast data transfer speeds 10 times faster than USB 2.0 (480 Mbps). To ensure the transfer speed, please ensure that the SD card and interface are 3.0

3. [Friendly]: The combination of standard USB 3.0 plug and USB C plug makes this card reader compatible with all USB C devices and tablets that support OTG function.

4. [Super Speed]: With powerful and reliable functions, it can process data and files (create, copy, move, delete, rename, etc.) music playback, video playback, and camera photos. No APP is required.

5. [Contents]: 1 SD/MMC slot, 1 Micro SD/TF slot (excluding SD/Micro SD card). Plug and play: no driver required. No additional power supply is required. All CLWHJ usb sd card readers enjoy 12 months free warranty

CARD READER

I finally found something compatible with my new Galaxy S6! One of the reasons I bought a tablet is that it can be used with a 512GB MicroSD card. No. After purchasing the first 512GB card and then the 400GB card, I can only get a 256GB card to work. I found this unit by accident and it worked very well. I tested 512GB and 400GB cards that did not work properly on the tablet, and these cards worked well. For only a few dollars, I increased the external storage capacity to as many drives as needed. It is small, durable, and feels tough. I mean don't jump around hard, but if you put it down, it won't break. I am very happy

CARD READER

One of the services I provide requires recording a video of the interaction between parents and children. Once I have this reader, I can record on one device and upload to another device through the reader. Usually, I record with my mobile phone and allows me to display the playback of the video on other devices. I have been able to use it on all laptops. So far, I like it much because it means I don't have to carry my laptop when I meet with clients.

I have a camera that can shoot 360 videos. Very good, except the file is very large. They are 1 GB videos per minute, with a size of 5.7K. This means that due to the limited storage capacity of the camera itself, I will often need to unload the video from the camera to the SD card of my Android tablet. After putting it on the tablet, if you need more space, you can unload the file to the USB drive. Without using this adapter, the only way to unload files directly from the camera to the tablet is through the camera software. This is a cumbersome operation, you need to call up each file independently in the software, and then use the software to transfer it to the tablet. Once placed on the tablet, it needs to be moved to the SD card of the tablet where all the memory storage is located. Once the files on the tablet are deleted, they need to be deleted. And remember that this is a file that operates file by file. And the actual transmission rate is very slow. This is where the USB type-C/OTG reader comes in handy. Just put the camera's SD card in the card reader and use the USB Type C end of the connector to insert it into the tablet. At this point, you can mark all the files on the SD card and move them directly to the SD card of the tablet. I did some speed tests on the connector, and I think the transmission speed of the USB Type-C end is very good, the transmission time per gigabyte is 30 seconds, and the lightning transmission speed of the USB Type A 3.0 end connected to the computer is per thousand Megabytes for 8 seconds. Transmission rate. Since my tablet uses USB type C, this means that after returning to my hotel room, I can transfer an hour of video in about 30 minutes. This is a very convenient connector because it can accommodate both USB Type A (this is the traditional rectangular USB connection into the computer) and USB Type C (this is a popular connector type used by many Android tablets and phones). If you need this type of connector, then this type of connector can work well.
