I don't know how I lived my life so long without a juicer like this one! I am a recipe developer and spend a lot of time in the kitchen. I've always had a little wooden reamer to juice my lemons and limes, but I've quickly realized that this juicer is going to make my life much easier! Don't even get me started on how easy it will be to make margaritas... There's nothing too complicated about this tool, but it's easy to use and works well. It's big enough that it fits oranges, but also works well on small limes. Just pop the citrus half in, squeeze over a bowl, and you're done. Because it's a simple device, it's also super easy to clean. Really my only complaint about it is that it's a pretty large tool and it won't easily fit in a drawer. But that's not the fault of anyone (except my own for having too many kitchen tools!), so this still gets 5 stars from me. I know I'll be getting a whole lot of use of this!

Charmin' Farmer 2020-09-14 22:25:03

I like the juicer but I've found I have to third all of the fruit I put into it. I thought it was more of a lemon size since it says easy peasy lemon squeezy, but it's really more of a navel orange size. The press does a decent enough job, but it's not perfect. It leaves a lot of pulp and fruit on the rind, and a lot of juiciness is still in it. The holes are rather large, so it misses some of the material. Something else I've noticed, particularly with oranges, is when pressing and it creates the dip to flip it inside out - it causes the juice to pool on the upper side of the fruit so it doesn't go into the cup. Sometimes it sprays back in your face, no matter how cautious I am. It's heavy duty and the handles are stout but the design could use a little work. It will be fine for me using our overflow of produce and then putting the scraps out for the chickens, but to get every drop it needs some work. It doesn't quite press tight enough. Even so, it's a nice looking press and it does alright with smaller slices. I've found that instead of halves, I can cut things into thirds or quarters and get a better press out of it. It also works a little better with thicker slices than it does splitting the citrus.

I used this juicer the other night to add lime juice to a dressing I was making and took a chance and squeezed it directly into the bowl. I was so happy to see that no pulp or seeds came through at all, just a shot of perfect lime juice. I personally wasn't able to get the lime to flatten out completely, but I do feel I got most of the juice out. I think it must depend on the thickness of the peel (or the strength of the user). At first, I was hesitant, thinking the pressure of squeezing would break or bend the device, but it definitely held strong. I don't see any possible way this could fit a grapefruit, but it will be amazing for lemons and limes, and possibly small oranges. I love that it's made of stainless steel, which should be durable and always looks great. It was so much cleaner to use than the traditional hand juicers or reamers, almost no touching at all and way less cleanup. Very pleased!

Really well made, works excellently for lemon, lime and grapefruit.

Krithika Chandran 2020-10-01 21:36:44

Quite sturdy, so easy to juice without much efforts. Works well for lime, lemons as well as oranges. Useful for people who consume citrus fruits regularly.

Les 2020-09-22 13:59:53

Review of Amesser Juicer Manual Stainless Steel Squeezer This is a larger squeezer so will accommodate some larger fruit up to about 3.25 inches (8.5 cm) in diameter. The height of the fruit may vary but the height of the bowl is about 2.25 inches (5.7 cm). On an orange the outermost layer is the flavedo (some refer to this as the peel, skin or rind) and this represents the widest that can be accommodated. Overall length is about 9 inches (22.8 cm). Worked pretty well on some lemons although I really wouldn't call this "professional" which seems to be an advertising term commonly used to hype products. Note that there will be some leakage and/or spray depending upon how level the squeezer is held. Should be expected but had some juice squirt out along with a seed or two.

I like to make vegetable broth and also poultry stock broth. I use this tool to squeeze out the last bit of goodness from the remaining veggies in the stock pot after I strain out the liquid. I just like not wasting anything, especially one that I work so hard to get. Aloha,

Viola Merrill 2020-11-21 18:39:23

On the second day using this squeezer, I managed to torque the hinge and the riveted pin popped out. Don't know how I did that; this is the second device of this squeezing method I've purchased, and I "thought" I was good at it; cut side facing toward the holes. Used a hammer to pound it back all together, and it works again. It doesn't get all the juice out, I take my partially squeezed lemon and hand squeeze to get another 10% out, pretty easily. When dishwashing, I take off the silicone sleeves, or else water gets trapped in them. PS - I have terrible grip strength, can't open jars.

I really wanted to like this, but my experience was not as good as that of other reviewers. First off, let me point out that I've tried it only with standard grocery store lemons (not the thinner skin Meyer Lemons). I cut the lemons in half, put one in the squeezer, citrus side up, and squeezed...and got sprayed with lemon juice. Every time. No matter how I tried squeezing or whether I used a small lemon or larger lemon. I kept going, squeezing firmly, and at one point the handle starts to bend a bit. Nothing permanent - there's some flexibility there - but it's not as sturdy as one might imagine either. You get a good amount of juice, and no seeds, so that's good, but when you remove the squished lemon half, you realize there's still some juice sitting in the lemon - along with the seeds, of course - so I always got another teaspoon or so of lemon juice just by dealing further with the lemon half without any equipment. Ultimately, I returned to my old standard - a green glass lemon juicer from the 1940s that I picked up in an antique store years ago. I have to pick out the seeds, but I get all the juice and don't have to wipe my face off afterwards.

I didn't expect it to be so heavy. These are solid built and way bigger than I thought. Works great in squeezing juice from both lemon and oranges. Overall a very good product and I loved it. It's a great addition to the kitchen. Highly recommended to anyone. My 2 cents below: Pros: - Works great in squeezing juice. Tried on both lemon and oranges and it worked great - Easy to use as handles are big enough and comfortable. Works effortlessly literally - Very solid build and durable for sure - For the build quality, this is very reasonably priced too - Multiple handle color options to choose from Cons: - These are not the lightest ones and meant to be in the kitchen. Not meant for portability
