

Our SmartBox isn't just a consignment box; it sends real inventory data to the GO platform. Your customers can then easily keep track of inventory through the GO app. This allows for restocking orders to be sent to you in a timely manner.

Drilling Contractor
Reduce Rig Downtime and Cut
Overhead Costs

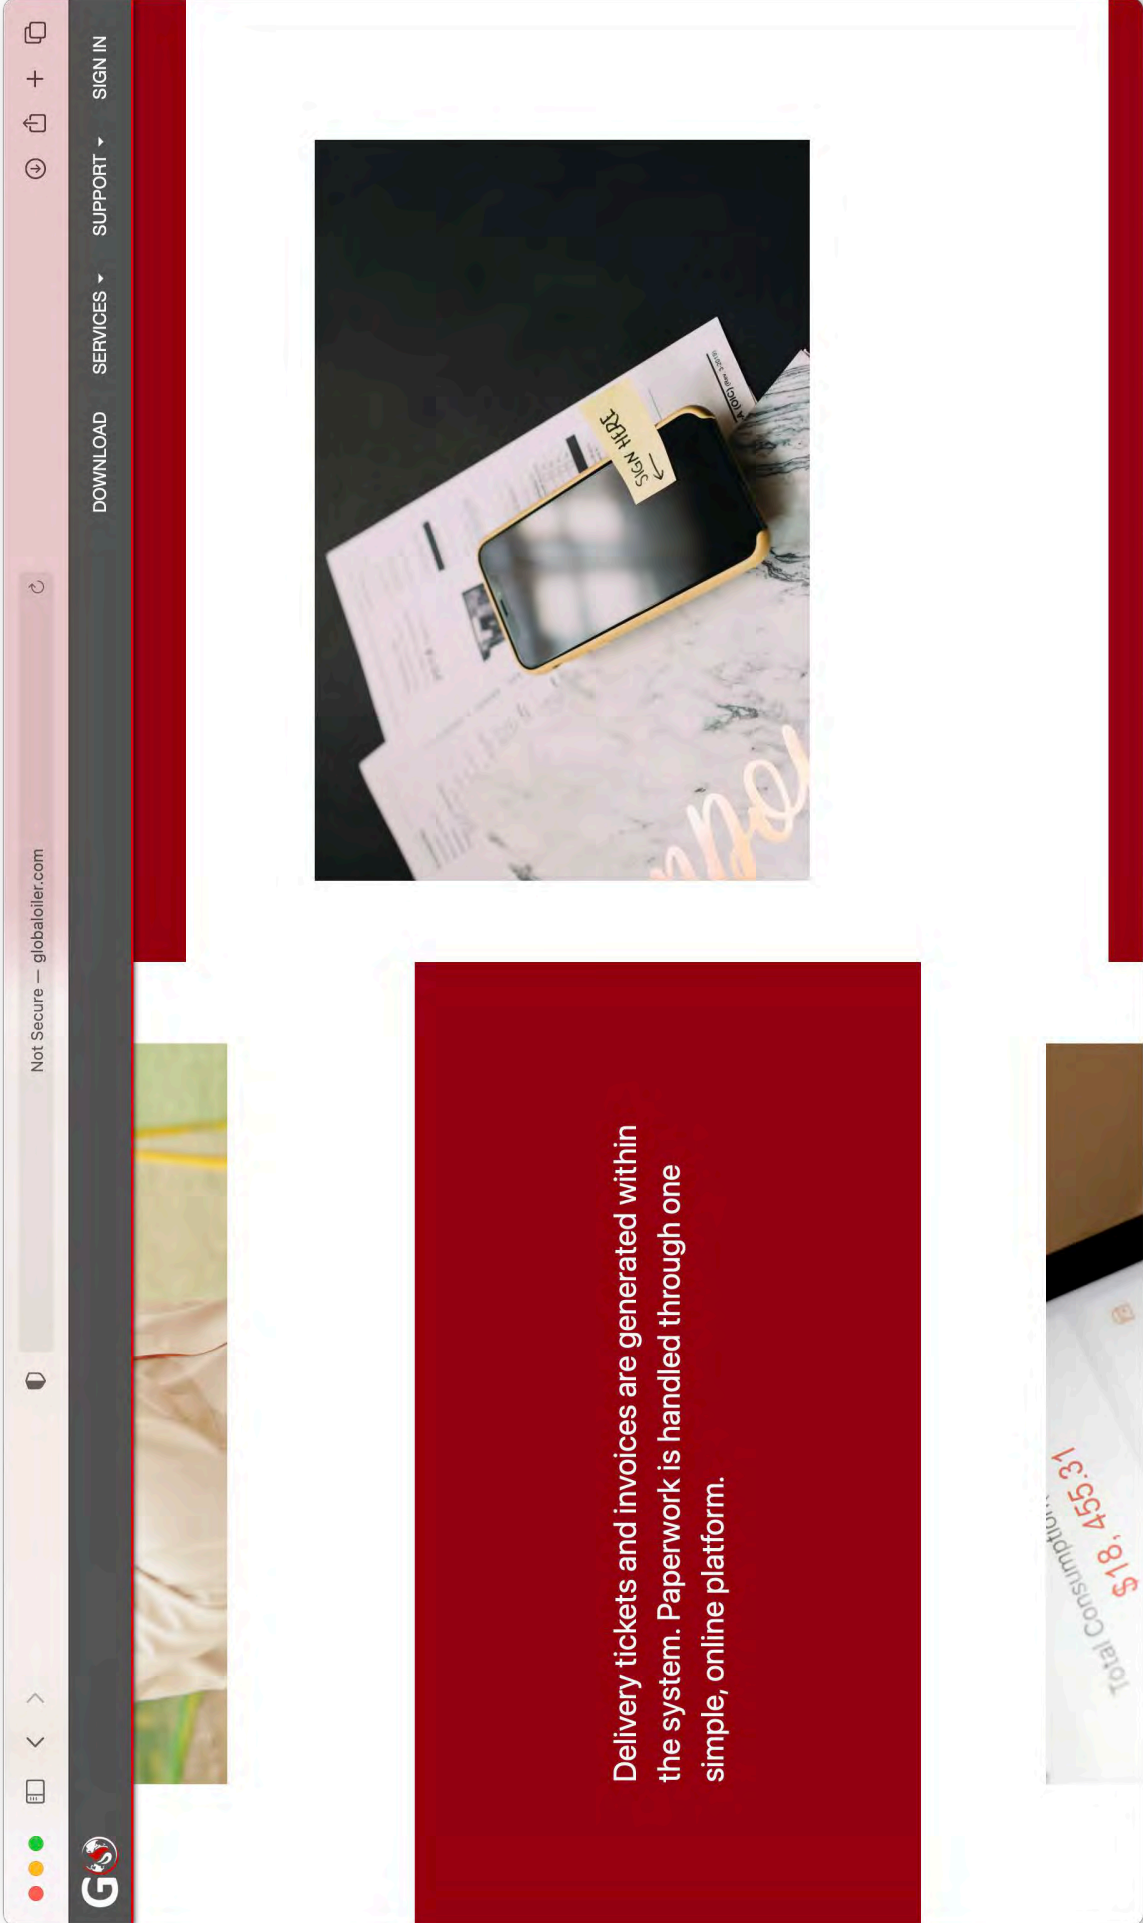

Our GO platform can be used from your phone or computer. The SmartBox uses patent-pending technology to log who takes which parts to create accountability. Easily keep track of your inventory without losing hours of labor.

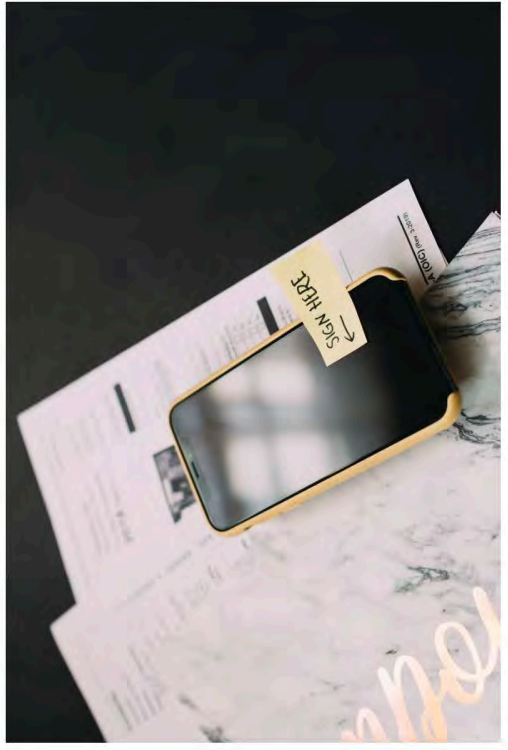

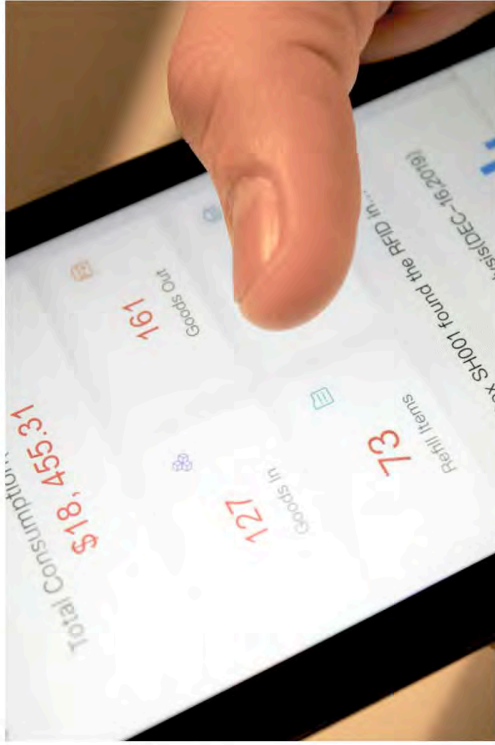

Customize your SmartBox to have rig parts ready before you need them. Using both the GO platform and SmartBox, you can avoid losing money on an idle rig.

Delivery tickets and invoices are generated within the system. Paperwork is handled through one simple, online platform.

View purchases easily in one place, and clearly see where parts are going and when. Inventory is logged in real time to help manage daily spends.
