

# Automated Remote Monitoring To Ensure Candidates' Authenticity!

SCHEDULE A DEMO

## Automated Monitoring

Glider has a comprehensive monitoring system to ensure the authenticity of candidates and prevent cheating activities. Our advanced and robust online proctoring with webcam and screen recording enables recruiters to track and monitor candidates' activity for the entire duration of the assessment.

### Face Detection

Glider's face detection mechanism flags multiple faces in the frame and instances of candidates looking away from the screen by tracking the candidates' eye movement and warns recruiters of candidates' probable suspicious activities. Candidates' image captured at the beginning of the assessment is matched while candidates take the assessment to prevent impersonation.

### Tracking candidates' activity

Glider identifies if candidates' switched tab on the browser to search the web for a solution or copy-pasted from different sources. The recruiters can restrict the candidates' movement from the assessment area by setting the tab switch count, candidates exceeding this count will be auto-disqualified. A detailed activity report will be available for review upon completion of the assessment.

## Comprehensive Monitoring Report

Glider's detailed monitoring and cheating probability report captures every activity of the candidate and presents it to recruiters for unbiased and informed decision making. The hiring team can also review these reports anytime.

### Cheating report

Glider captures minute details of every copy-pasted code snippets along with the time of the event. This helps recruiters filter out genuine candidate profiles and build a pipeline of competent candidates saving a considerable amount of time for the hiring team.

### Code plagiarism check

Glider helps investigate potentially copied code through identifying the possible sources of plagiarism on the web and also does a code similarity check to compare the code with other submissions to ensure that the code is unique.

## Auto-Flags Cheating

Glider enables swift decision making with the data-driven representation of the candidates' activities through the auto-flagging algorithm.

### Suspicious activity auto-flagged

While Glider records the video of the candidate all through the assessment, the recruiter can effortlessly apprehend deceitful submissions as Glider auto-flags multiple faces detected in the frame and also when the candidate is away from the screen for a considerable duration.

### Audit trail with audio and video recording

The precise candidate report captures the video recording all through the session which is accessible anytime for review along with a complete audit trail covering data such as skill reports, monitoring & plagiarism reports and video & screen recording.
