charger

easy plugin and use for the annoying variations in cords that Apple has recently designed. Glad to be able to plug both my iPh one and iPad into the same socket. So much for having USB ports in my plugs--boo to Apple!

charger

One of the things I did not really like about the OEM 87W Macbook Pro charger is that it only has 1 USB-C port. This RavPower 90W charger has 2 USB-C ports AND it's smaller vs the OEM Apple charger. What's not to like??? As you can see in the picture it is a little bit thicker but overall much smaller. I put it through a few tests, charging my laptop and mobile phone (Google Pixe l 3) and both charged very quickly with no issues. I also charged up my iPad Pro with no issues. In a pinch this charger c n fit in my pocket!!!

charger

Also the high quality construction is something you do not see on Amazon very often any more.They used blue anodize inum with a dense black rubber and a nice braided nyloncord. See the pictures.I imagine these cords will last a very long
