The click feel is unchanged, and the noise reduction rate is more than 90%

The world' s largest mouse certified by the British Noise Control Association

Insert the mini wireless receiver into the USB slot, easy to set up

Energy-saving design that automatically enters sleep mode when not in use, battery life up to 18 months

Suitable for computers running Windows, Mac, and Chrome OS; it can still establish a wireless connection when the distance is up to 10 meters*, and can achieve precise movement

People who are looking for a silent mouse that can be used in any place with little click noise. People looking for low battery consumption, long battery life, and tracking performance. People who are looking for a simple mouse that can be easily connected and immediately used.

Electrical products are suitable for overseas voltage environments (such as American and Japanese home appliances are mostly suitable for 110 volt voltage environments), please make sure that the product supports your local voltage before purchasing electrical products (such as China's household voltage environment is 220 volts) . If there is no specific introduction on the product detail page, please log on to the brand's official website to check and fully understand the voltage and other electricity demand information of the relevant product. If the product does not support your local voltage and other electrical environment, you need to use an appropriate transformer (also called

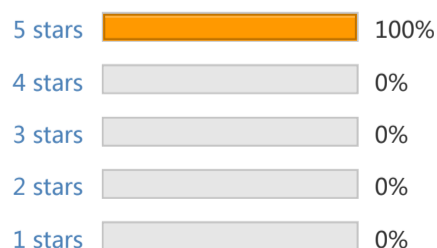

"voltage converter", "power transformer", etc.) to transform it before use, otherwise it may cause electrical damage or other losses. When you purchase and use the transformer, please strictly refer to and follow the instructions for use of the transformer, and pay attention to the safety of electricity use, so as to avoid electrical damage or other losses. If the product you purchased has other users, please confirm that these users understand that this product needs to be used with a suitable voltage converter to ensure safety.

mouse

The mouse is very light but manages to feel well made and not hollow. The mouse was balanced in the hand regardless of type, no "heavy butt" problems here. The clicks all around feel good. Resistance is significantly more than a G403, but less than a Huano. The side buttons are some of the best I've ever used - medium resistance and tactile without appreciable pretravel.

mouse

The appearance and quality of Microsoft's mouse is still very good. The mouse feels really average, and the button sounds are a bit loud and deep. The Bluetooth connection is very fast, and overall satisfaction.

mouse

Very fast. Bluetooth and wireless dual-mode switching, convenient to switch and control notebooks and computers. The appearance of the mouse is relatively stable, and for users with large hands, it is more comfortable for office use. At the same time, the sensor also helps the game play. No rollback has been found so far. Just note that the name of Logitech in Japan is different from that in other regions.
