**Information:**

- **Brand: GRWA**
- **Name: Motorcycle Air Filter**
- **Specification: single**
- **Material: filter paper + stainless steel mesh**
- **Weight: about 100g**
- **Specification: diameter 35mm**
- **Model: Modified general-purpose model (please confirm the caliber of the vehicle carburetor)**

- **Maintenance: super long life, more than 50,000 km, clean once every 4000 km**

#### Features:

- Made of high-quality rubber, double-layer sponge filter
- Effectively filter the dust in the air, the outer layer is easy to clean and replace, supply fresh air to the carburetor, maintain the power of the engine, and greatly improve the service life of the carburetor
- The use of high-strength stainless steel locks overcomes and avoids the phenomenon of wire breakage of ordinary locks in the past
- This product is a double-layer steel mesh filter mushroom head, suitable for models with different engine compartment layouts, increasing the intake air flow, filtering air impurities, and allowing your car's engine to breathe more smoothly

#### The important role of air filter:

**The engine needs to suck in a lot of air during the working process. If the air is not filtered, the dust suspended in the air is sucked into the cylinder, which will accelerate the wear of the piston assembly and the cylinder. Larger particles entering between the piston and the cylinder will cause serious "cylinder pull" phenomenon, which is especially serious in a dry and sandy working environment. The air filter is installed in front of the carburetor or the air intake pipe to filter out dust and sand particles in the air, ensuring that sufficient and clean air enters the cylinder!**
