Making the Revenue Cycle Smart

Janus is on a mission to improve the decision-making and effectiveness of revenue cycle workers so health systems can collect more cash and reduce the cost-to-collect.

SEE FEATURES

Alleviate the Cash Strain

Every Healthcare Provider spends millions of dollars on revenue cycle management and still struggles with collecting every dollar they're entitled to. Imagine a world where every worker was recommended the optimal set of tasks, tedious and common workflows were eliminated with automation, and insight into people, productivity and process were made actionable. How would that impact your profitability?

Observe
Capture all systematic activity occurring across the revenue cycle to build a map of processes that are causal to a positive outcome, allowing evidence-based recommendations on how to deploy decision support and automation.

Illuminate
Visualize insights into productivity and processes with actionable recommendations for improvement opportunities

Pathfinder
Empower your teams with a real-time decision support engine to maximize productivity and compliance with optimal-path workflows

RevBot
Off-load highly repetitive and consistent tasks to intelligent automated agents, allowing the reprioritization of human labor. Leave traditional RPA behind.

Observe: Understand the Actions of your Users Across their Entire Workstream.

Discover the systematic paths of every claim and easily determine the optimal path to getting paid.

Illuminate: Democratize Data-Driven Decisions with Actionable Insights

Learn about your team's productivity, explore processes they are taking today, and take action on trends to optimize reimbursement.

Pathfinder: Your team's ride-along coach

Bring forth data-driven recommendations and collective knowledge to avail the best process to everyone in their current workflows. Our decision support engine seamlessly integrates with your existing systems and provides real time guidance on the best decisions to make.

RevBot: Offload highly repetitive tasks to automated agents

Janus recommends specific tasks that can be automated and performs that automation while learning how to improve over time. Using healthcare standards and accepted interfaces instead of pure screen-scraping, our automation plays nicely with your existing systems and prevents re-work every time there's an application change or upgrade.

About

Janus is on a mission to make healthcare revenue cycle management smart. The current healthcare revenue cycle process is rife with inefficiency and opportunity to help healthcare providers collect more of the revenue they are owed by insurers. Janus uses machine learning and analytics to derive insights into where opportunities lie to improve collection, reduce claim denials and lower cost to collect for healthcare providers. Using these insights, Janus provides robust decision support to guide users within their workflows with predictive recommendations on what to do next, and automates highly-repetitive tasks. Founded by former EHR executives and revenue cycle operators with deep industry knowledge, Janus is working to transform a multi-trillion dollar industry that saw over $250 billion dollars in administrative waste in 2019.
