

CARTOGRAPHER

The Engine Behind Making Your Data Work For You

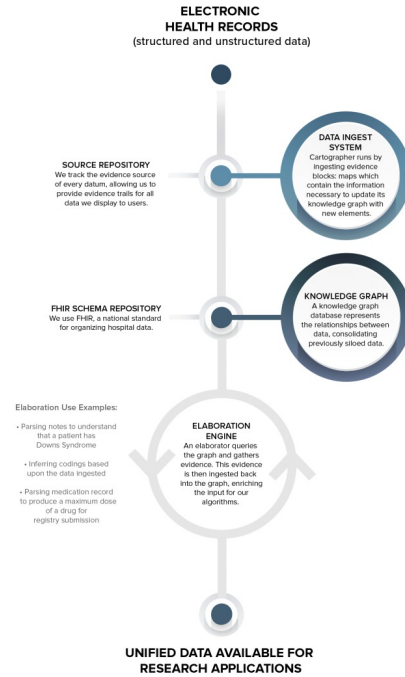

Cartographer is our core data platform that enables hospitals to collect data from any source – the EHR, Cath Management System, Pharmacy system, etc. – to gain insights and assistance. Cartographer sorts through all the information and presents you with what’s most relevant to your need.

IT DOES EVERYTHING YOU'D DO IF YOU COULD

Using natural language processing, Cartographer’s AI reads through the clinical notes to extract the unstructured data. It combines that with the available structured data to give you a more thorough picture. It is like if you had the time to read the entire EHR and every other piece of relevant information, remember all of it, find patterns, compare past metrics, and make recommendations. That would be impossible for a person to do because there is just too much data, but Cartographer does just that. Cartographer becomes like an extra charge nurse who knows everything and helps you make decisions grounded in reliable data. [LEARN MORE](#)

IT HELPS YOU MAKE DECISIONS WITH CONFIDENCE

Unlike how we work as humans, Cartographer continues to search after finding a piece of information the first time. Through an exhaustive search of like incidents, you’ll know the reliability of that information. It compares the decisions made during previous care incidents to boost your confidence in the decision you need to make now. [LEARN MORE](#)

THE PROCESS BEHIND THE SOLUTION

Cartographer can connect with all the various data sources because it communicates using the HL7 FHIR standard—an industry data standard. This makes interoperating with other hospital systems and vendors a snap. Then Cartographer compares the data sets and finds relationships to further desilo sources and enrich the learnings. [LEARN MORE](#)

CARTOGRAPHER IS THE POWER BEHIND ALL WE DO

Cartographer is the engine that drives our other applications. It enables the sourcing of data from different platforms and the ability to use that data in a variety of specific ways.

CARTOGRAPHER CAN POWER YOUR NEEDS

You can use Cartographer to power your custom solution. It can power custom research applications, operational data science projects, and be an ad-hoc analytics stand-in. [LEARN MORE](#)

Let us walk you through how Cartographer works and how it can work for you.
