- **【Newly Developed 3D "Inception" Mode】** Proudly present the updated okfishfish gimbal stabilizer. This stabilizer features a newly developed "inception" mode that would able to vertically rotate your phone 360° spontaneously when filming, giving you the master-like video-making experience. It is the all-in-one tool for storytellers like you.
- **【You can also be a Professional Director】** From fast-moving action, like sports, to vlogs and interviews, to documentaries and independent features, the hohem's design sophistication and convertibility make it a unique production tool. Aside from modes mentioned above, this tool features the basic zoom/focus control, all following/all lock/pan following/pan & tilt following modes & 3 ¼ Screw hole for accessories such as a tripod or a video light.
- **【Endless Possibilities via "okfishfish " APP】** Enjoy controlling your filming tool both on your gimbal and in your iOS/Android app today! Slow-motion recording, Beauty retouching, 360°panorama, face/object tracking, time-lapse recording & panning mode changing can all be realized in your smartphone app. **【NOTE: Must balance your phone manually via balancing arm before use, especially for iPhone Pro Max!】**
