

Our technology explained

Meveto completely removes the use of Passwords, and utilizes "Private & Public Key Encryption".

Why Meveto is better and safer than passwords

Watch this video for a visual explanation on why Meveto is not only better, but also safer than passwords.

- ✓ Keys are generated on your phone
- ✓ Your Private key never leaves your phone
- ✓ Only you can login to your accounts

Why Meveto is Better & Safer

from Meveto

02:33

Private & Public Key Encryption

Once you register on the Meveto app, your phone will automatically generate a key pair, a Private and a Public key. The Public key is sent to our server, and is associated with your account. Your Private key remains on the phone, and only you have access to it.
