June 2021

Executive Summary

Hydra International USA, LLC. is pleased to provide the following pricing for our proprietary CleanTRACK™ product. CleanTRACK™ is a long-term dust suppression technology that will control dust and promote water drainage. In testing, 100% of CleanTRACK™ chemical remained after 1000 freshwater flushes.

CleanTRACK™ uses a proprietary, non-toxic chemical formulation that, when applied to gravel or soil surfaces, leaves a thin film on the minerals. This mineral coating creates an intergranular attraction between fines, which not only prevents them from becoming airborne, but will also compact the road to create a more durable and stable surface. The water repellent nature of this coating will control dust and promote water drainage, which will minimize water-related damage such as potholes, ruts, and wash boarding on roads, while greatly reducing overheating issues caused by dust in heavy equipment on location.

Advantages

- Easy-to-apply, cost-effective, long-term coating.
- Moisture-Repelling: Coating will last through wet or wintery conditions; does not wash away.
- Any Road: Can be applied to the surface of any road or area, as well as integrated into the soil and gravel.
- Reduction In Dust: Reduces the number of airborne fines to which the surrounding environment is exposed.
- Increased Visibility: Improve visibility for heavier traffic on non-paved areas.
- Reduces Maintenance: Can increase the life of filters, sensitive electronics and equipment; reduces the frequency and cost of maintenance procedures.

Thank you for the opportunity to provide these services. We look forward to speaking with you further on this project. Feel free to call with any questions you may have.
