

why do this?

the problem

Currently there are about **3.2** billion people with no access to the Gospel and **1.3** billion people living in extreme poverty.

&

The current way of doing charitable work is very inefficient, ineffective, unsustainable, and not very strategic or transparent with how they use your generous giving.

the solution

who leads the industry in:

Efficiency

Effectiveness

Sustainability

Transparency

It's that simple.

our approach

what we do

- 1** We locate the places in the world with the most urgent physical and spiritual needs according to the latest metrics.
- 2** We identify the organizations who can most effectively, efficiently and sustainably meet these needs and design a strategic project with them.
- 3** We fund these projects and oversee their progress, following the guidance of global and local experts to ensure no harm is done and that maximum impact is achieved.
- 4** We report everything back to the donor: how every penny is used, the progress of the projects, the stories of the lives changed and the global impact made.

how it works

what donors do

People donate to The Collective Fund, where **100%** of these funds are designated for project use only.

All Access stretches their donations through our strategically designed, high impact projects.

Donors receive detailed and customized updates and reports on the impact of their donations every month!

The most efficient and transparent donor experience in the industry!

All Access International is divided into two separate financial accounts:

The Collective Fund

100% of these funds are designated for projects.

All Access Operations

These funds cover all the operational expenses.

How do we provide our donors with a 100% financially efficient experience?

This is where you can make a special impact!

Proof of Concept

Project 001 - West Bengal, India

We're current on track to plant more than 100 churches in one of the darkest places in the world in 2021 for **\$20,000**.

What does this same task take using the traditional missions model?

\$44,000,000 a year!

This project is 2200x more efficient, 7x faster and exponentially more effective and sustainable than the traditional missions model!
