### MyTravel

DoD awarded a production contract to Concur Technologies, Inc. to continue the phased deployment of the successful Defense Travel Modernization prototype across the Department of Defense. When the new capability, branded as MyTravel, is fully deployed, the Department's aging and costly to maintain legacy Defense Travel System (DTS) will be retired. [Learn More about the Defense Travel Modernization Effort.](#)

#### About MyTravel

MyTravel uses SAP Concur's commercial Software as a Service to book travel, manage travel related expenses, and initiate travel-related financial transactions. The system is being configured using an agile development methodology. Currently, the prototype is configured to accommodate *simple* business travel that includes:

- Short-term TDY (less than 30-day duration)
- Single location in the United States (including US-owned territories)
- Excludes military installations
- Uses a single Line of Accounting
- Civilians with a Government Travel Charge Card Individually Billed Account (GTCC IBA)

The Defense Travel System is used to process more complex trips until the MyTravel capabilities expand. To help you determine which system to use to book your travel, use the [DoD TravelBot](#).

MyTravel is being implemented across DoD in a phased approach. Currently, the focus is on deploying MyTravel to all Fourth Estate organizations on the Defense Agencies Initiative (DAI) financial system. Only users whose organizations have access to MyTravel are able to login.
