Adult/Child CPR Rescue Mask

Hard Case with Wrist Strap

Preferred by professionals, yet easy enough to use for any rescuer, our latex free rescue mask makes resuscitation safer for the responder and more efficient for the patient. Since you won't be pinching the patient's nose shut, each rescue breath will have two avenues of entry into the body.

By using this type of mask, rescue breathing is more efficient. Supplemental oxygen, connected by way of the mask's oxygen inlet, increases concentrations of organ-sustaining oxygen by

50%. Remove the included valve, and the mask can be connected to a BVM. The BVM with reservoir can increase patient oxygen concentrations to 100%.

The quality transparent mask features a one-way filter valve and elastic head strap to facilitate hands-free operation. A pair of gloves, antiseptic wipe, and instruction card completes the set.

Whether you're a rescue diver, lifeguard, or on your county's Emergency Response Team, this is the breathing barrier to carry in your pocket or keep in your first aid kit. Lay responders as well will find the easy to use mask an invaluable asset when called upon to breathe for a patient, regardless of their age.

Pick up several to keep at home, in your car or anywhere you might need to utilize your resuscitation skills. You too can be ready with the right tools!
