

BTCS Analytics

Our offering plans to tear down the technical barrier of entry to crypto and blockchain while offering scalable reward potential and predictability. The BTCS Analytics Dashboard plans to integrate and deliver a full range of offerings centered around two core features: Portfolio Analytics and Staking-as-a-Service.

Portfolio Analytics

Our data analytics dashboard allows for portfolio monitoring and crypto-asset tracking across multiple exchanges and chains. These tools allow you to consolidate your crypto trade data onto a single platform, enabling users to view and analyze token performance, risk metrics, and potential tax implications. In the future, we plan to enable the dashboard to calculate year-end reports with other enhanced features in the development pipeline.

Mobile Ready

Supported Exchanges

BTCS plans to broaden its suite of performance-tracking tools, add additional centralized and decentralized exchanges, as well as wallets. Currently, BTCS Analytics supports 7 exchanges and over 800 digital assets which can be securely synced to your personal dashboard.
