

Blockchain Infrastructure Solutions

BTCS, through its blockchain infrastructure solutions business, processes and validates blockchain transactions and is rewarded with digital assets. We are actively operating nodes on the ethereum 2.0 network and have staked substantially all of our ETH holding. We plan to expand our proof-of-stake (PoS) operations to include other disruptive blockchain protocols. We are not currently securing proof-of-work (PoW) blockchains, such as bitcoin's blockchain, but may in the future. We are also actively developing a proprietary staking-as-a-service platform to allow users to stake and delegate supported cryptocurrencies through a non-custodial platform. A more detailed description of our blockchain infrastructure solutions business can be found in our SEC filings and in our corporate presentation.
