

Services available in all 50 states.

SESCO group

At SESCO, we focus on assisting our clients with all of their UST compliance needs. SESCO understands that managing multiple facilities, employees, and inspectors can be difficult. SESCO's **BASELINE™** can manage all of these issues for you and ensure that your facilities, employees, and inspectors have the proper information and tools they need to stay on top of compliance tasks without the headache of trying to schedule and do it all yourself.

SESCO's **BASELINE™** is a cloud based compliance management tool that will keep your UST/AST system in compliance with Federal and State regulatory requirements. **BASELINE™** includes an initial on-site audit to inspect and ensure that your UST system components are operational and that all of the required documentation is up to date. Once SESCO has conducted the audit, any compliance or action items can then be addressed and documented in **BASELINE™**, allowing you to be proactive in maintaining compliance at your facilities. In addition to addressing on-site compliance issues, **BASELINE™** also tracks Federal and State issued Notice of Violations (NOVs) for your facilities and will assist you with resolving them.

BASELINE™ generates and organizes all of your compliance information in one easily accessible cloud based Compliance Binder, making it simple to obtain and analyze information about your UST systems. In addition to the site specific Compliance Binder, each facility is assigned a QR code that can be scanned to confirm that your facility is in compliance.

The mission of SESCO is to provide a proactive alternative for managing environmental compliance for our clients, thereby keeping them in regulatory compliance, and lessening the burden of interpreting and dealing with compliance issues.

SESCO can help manage your UST system compliance, interpret results, provide cost and funding alternatives, and deliver consistent quality. SESCO group – Peace of Mind, Restored.

- Cloud based UST compliance audit
- Automatic compliance form generation
- Notice of Violation tracking
- Easily accessible Compliance Binder
