**Question:** Does the backlight turn on automatically when dark? if not, does it stays on or it will go off after a few seconds? what about battery life?!

**Answer:** You need press button B for 2seconds to turn on backlight.It could last 5seconds then turn off.The battery life could last more than 1year when you use the bike computer 1 hour per day.

**Question:** I'm having trouble figuring out how to install this on a spin bike. The description said it works for spin bikes, but the directions are for a road bk

**Answer:** It's really dependent on how your bike is built whether or not there's a way to do it. I put the cadence sensor (magnet side) on the inside of the right pedal, and the sensor side on the back of the part covering the chain/belt. The distance sensor I put on the inside of the front fork and the corresponding magnet on ... [see more](#)

LP

##### exactly what I needed

Reviewed in the United States on November 30, 2021

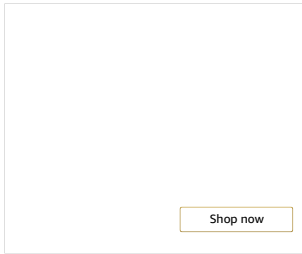

**Verified Purchase**

I have an old Reebok home spin bike with no computer, and I was looking for something not too expensive to track my RPMs while working out. This item worked perfectly, I only had to purchase larger zip ties than the ones provided to get it secured on my bike frame. The display is bright and clear, only thing that would make it better would be backlighting.

This Dream Sport bicycle speedometer perfectly matches my bike and shows the speed and cadence ,total distance I need, most importantly, the way the wireless connection is basically synchronized, no data loss, small appearance, big enough display, and up to 35 features of the wireless watch, which I recommend

**Very Basic Computer**

Reviewed in the United States on August 29, 2020

Verified Purchase Early Reviewer Rewards (What's this?)

It does the basics, but clicking back and forth between the two menus and then through each menu is a little annoying due to the buttons themselves. The info is jumbled and very busy on the screen, but it's all there. My one major issue is that in order to reset the distance to zero for each ride, you have to do a complete reset of the computer, meaning the time, wheel specs, etc.

**Good item**

Reviewed in the United States on August 9, 2020

Verified Purchase Early Reviewer Rewards (What's this?)

Wanted to get idea of miles we were doing with bike on the trainer stand. Needed it to reach to back wheel as front was stationary. Worked great. Once weather broke transitioned to outdoor bike. No bells and whistles of the more expensive models, but didn't need them. Worked for what we wanted.

**Cadence sensor didn't work**

Reviewed in the United States on August 1, 2021

Verified Purchase

I love the idea of this product and it would have worked great if the cadence sensor wasn't broken. The speed sensor worked fine and the data showed up on the display, but the cadence sensor's data never showed up on the display no matter how it was positioned. I'm in the process of returning this and I hope I just got a bad batch because I think it's normally a helpful product.

**Only fits a tire**

Reviewed in the United States on February 16, 2021

Verified Purchase

I purchased this for my indoor spinner bike. Unfortunately this will only work on a regular bike tire.
