Frequently Asked Questions

RECOMMENDED:

What is the max number of tickers I can pass through Polygon's Snapshot?

On Chrome and Safari, snapshots have a limit of 4500 ticker characters or about 850 tickers that can be queried in one request.

Does Polygon offer Level 2 data?

No, we currently do not provide level 2 market depth information for stocks. We only support this data for crypto through our Crypto Snapshot L2 endpoint and our L2 real-time WebSocket feed.

How does Polygon create aggregate bars?

There are specific 'rules' that revolve around the 'Sale Conditions' defined in the UTP and CTA plan specifications that must be followed to calculate these aggregate values correctly.

Does Polygon have an endpoint that returns the latest trades, quotes and aggregates in one request?

Yes, we have a group of endpoints called Snapshots that return a 'snapshot' of the market for a single ticker, a group of tickers, or all tickers on the market.
