## Going beyond data.

Enabling your understanding of well and reservoir performance with intelligent insight.

We go beyond data to provide our customers with actionable insight on their wells and process facilities to enable production maximisation and drive efficiency across the lifecycle of their assets.

Our experts continually challenge the status quo, focus on the outcome and leverage disruptive technologies to remove bias to provide the transparency for every unique process challenge.

## Our approach.

We are energised.  
We focus on results.  
We will give you the insight  
and answer to your problems.

- Surveillance solutions tailored to your assets
- Our products, our people, our expertise
- Reliable data with valuable and actionable insights

# Solutions

## Surveillance

Periodic well test data for efficient forward planning

- Individual well testing on demand
- Access to data where wells or facilities have no well testing capability
- Real time measurements, real time diagnostics

## Well remediation

Assess the effectiveness of your remediation operations

- Identify underperforming wells
- Input into well remediation planning
- Real time wellsite remediation assessment

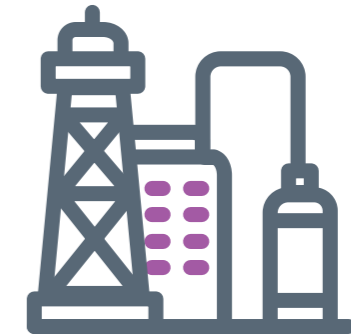

## Production optimisation

Manage the changing production profile of your assets

- Optimise production from wells and facilities to extend reservoir life
- Artificial Lift performance evaluation
- Facility throughput and process stability assessment

## Facility adaptation

Flow measurement and diagnostics in your existing process plant and facilities

- Greenfield solutions
- Reduced CAPEX and OPEX
- Brownfield solutions without flow line and facility modifications
- Single and multiphase applications
