Quality

We are a fully instrumented organization which puts a premium on quality. We are ISO 9001:2015 and ISO 13485:2016 certified. We work with our customers to make sure that our QMS exceeds the standards that is expected of a quality supplier.

When it comes to your parts, we want to be able to deliver a quality part, in a timely fashion, that fits your budget. By investing in the latest CNC turning technology, we have the machines and the knowledge to be able to complete a job in one setup with limited operations. This means we get more accuracy in our machining, and more competitive pricing for our customers.
