

JADE Features

JADE Remote Access

JADE Remote Access from JMARK is a solution that allows your organizations IT administrators or key employees to remotely access workstations or servers within their company. The JADE, web-based system provides a quick and intuitive user interface to remote control machines and obtain information about the machine. Some of the information that can be viewed, includes:

- Machine Name
- Hosts Connected
- Guests Connected
- Guests Last Connected
- Logged on user
- Idle time
- Domain
- Operating System
- Processors
- Available Memory
- Network Address
- Client version
- Model
- Manufacturer
- BIOS Name
- BIOS Serial Number
- Processes Running
- Software Installed
- Event log
- Services
- Remote command line
- Chat with remote users
- Notes about machines

In addition to the web-based interface there is also a mobile app that allows you the same access as the web version (available for Android/ and Apple), to remotely control machines no matter where you are or what device you are on.
