

Data Driven Solutions

Achieve double-digit shop metric improvement with FactoryTwin™, where recommended actions for improvement are based on reliable data and industry insights. Each implementation process begins with a custom

FactoryReadiness™ mapping. Our data experts assist clients in identifying and closing data integrity issues using FactoryValidator™.

Once data gaps are closed and outliers are validated, a FactoryTwin™ is modeled. Our software runs advanced AI and ML algorithms within this digital environment to deliver descriptive, predictive, and prescriptive analytics. These findings are transformed into actionable insights that are neatly packaged in an easy to use interface. Tracking KPI improvements

is inherent to the process.
