Request A Demo

The Complete GitOps Platform

Build, Test, Deploy, Analyze, Scale.

GitOps from Day One

Deploying apps, creating pipelines, adding environments are all git operations, enabled by an excellent UI so you don't have to choose between ClickOps and GitOps: get both!

Create Full Visibility

Codefresh's dashboards make it easy to track the entire DevOps process from start to finish, with integrations for your favorite tools built-in.

Grow with Argo

Codefresh offers the best enterprise Argo platform, with unique features, and the ability to scale far beyond a single instance.

TRUSTED BY

GitOps Continuous Delivery

Get the best tools to implement GitOps in your org. Deploy more frequently with more reliability than ever before.

How CD Works ›

Amazing Visibility

Track changes across their entire lifecycle with Codefresh GitOps dashboards. Codefresh makes it incredibly easy to find the root cause of failure so you can recover quickly and predictably.

Progressive Delivery

Codefresh extends the ease and universal compatability of Argo Rollouts with enterprise visibility, tracking, and health checks. Dramatically reduce the impact of change failure with canary and blue/green deployments.

Easily Enforce GitOps for Everyone

Every write-operation started in the Codefresh UI ends in a git commit. Codefresh not only makes adopting GitOps easy, it makes it the default.

25%

faster deployments are seen by teams that adopt GitOps.

Continuous Integration

The easiest way to get started with Argo Workflows with powerful, scalable pipelines.

How CI Works ›

Secure Workflows Behind the Firewall

Running secure workloads has often required teams to choose legacy tooling with limitations. With Codefresh CI, deploy the workflow engine behind the firewall and all your data stays behind the firewall. It's the ease of SaaS without the security headache.

How CI Works ›

Shared Pipelines

Codefresh separates the event trigger from its pipeline. This makes it very easy to create pipelines that are shared between many similar repos, cutting maintenance and improving reliability.

Unparalleled Scale

Each step in a pipeline executes in its own container allowing you to leverage multiple nodes, GPUs, and more memory to power massive scale.

Codefresh Leads GitOps

In the latest report from GigaOm, Codefresh is an innovative fast-mover and a leader in the GitOps space. Customers have been using and loving our GitOps features since 2020, and we continue to add capabilities that only a GitOps first platform can provide.

GitOps Control Plane

Build, Test, Deploy, Analyze, Scale.

Empower Developers with the Universal Dashboard™

Search, observe, and track apps, artifacts, environments, and health across all GitOps operators and environments regardless of their location. The Dashboard™ brings total clarity to software delivery.

Measure Team Effectiveness with DORA Metrics

Tracking the effectiveness of software delivery has never been easier – Codefresh automatically tracks lead time to change, mean time to repair, change failure rate, and deployment frequency at every level of your engineering organization.

Zero-Trust Architecture

Codefresh's GitOps Control Plane is uniquely architected to be trustless. GitOps agents operate independently and all write operations are done client side directly against git.

All code, secrets, and other sensitive information stays on your servers, not ours.

Fully-Integrated Software Delivery

Fully-integrates Argo Workflows, Argo CD, Argo Rollouts, CI/CD, Security, and more.

Integrates With the Tools You Already Love

Bring your favorite ticket tracking, security, monitoring, testing, CI, or any other kind of tool. Codefresh is designed to seamlessly integrate and expose key information from these tools in your DevOps dashboards.

Unified Interface for Argo

Codefresh is the easiest way to use the entire Argo suite of tools with integrations between all the tools to provide better visibility with actionable intelligence.

Bring Your CI, or Use Ours

Codefresh's CI is POWERFUL, but if your goal is just to start implementing GitOps deployments and you have thousands of pipelines, don't let us slow you down. Codefresh integrates with 3rd party CIs like Jenkins and Github Actions natively.

How Does Codefresh Enterprise Compare to Community Versions

		Open Source
Unified CI & CD		
Word-Class GitOps Operator		
Self-Managed		
Hosted		
Optimized for CI/CD Pipelines		
DORA Metrics		
Resource Creation Wizards		
Enterprise Control Plane		
Correlated CI & CD Insights		
GitOps First UI		
GitOps Control Plane		
Progressive Delivery		

SSO & Security		
GitOps Control Plane		
Max Application Support	50,000+	1,000

Codefresh Builds on the Fastest-Growing GitOps Tool

"GitOps is the best thing since configuration as code."

– Kelsey Hightower, Principal Engineer, Google

Learn More ›

Get GitOps Certified

Teams who adopt GitOps deploy more frequently, have fewer regressions, and fix bugs faster. Build your GitOps skills and credibility today with a GitOps Certification.

Learn More ›

Codefresh Hub for Argo

A central destination for certified Argo workflow templates. Consume from the library of proven, secure Argo templates for efficient workflows, or submit your own.

Access ›

ArgoCon

Connect and learn about GitOps with Argo at ArgoCon in San Francisco & virtual, September 19-22. Hear stories from adopters and maintainers alike.

Register ›

GitOpsCon

The leading day one event at KubeCon that dives deep into GitOps, the most popular topic in DevOps. This is perfect for newcomers and experts.
