Discover how we can help you launch and scale comprehensive, effective remote care programs that create exceptional clinical and financial ROI for chronic and post-acute care as well as wellness management.

Patient Monitoring Process

Having a patient centric, holistically connected care platform with the flexibility of monitoring patients remotely is the need of the hour. The covid pandemic has shown us we need a modified approach in transforming healthcare by replacing episodic approaches with a platform that can move patients in the right direction for a continued path towards a healthy life. Understand how FitPeo can help you launch and scale comprehensive effective remote care programs that create exceptional clinical and financial ROI for chronic and post-acute care as well as wellness management.

Client Testimonial

TESTIMONIALS

“ Since utilizing FitPeo over the last 6 months, we have been able to reduce our hospitalization rate while increasing our revenue. We love the easy to use platform and our patients love the fact that they are connected with their provider 24/7. If I was to rate FitPeo, I would definitely give them a 5-star. ”

The FitPeo Pathways™ platform makes disease management and post-acute-care programs more efficient and effective.

We do this by leveraging a virtual platform for payer and provider collaboration that assesses patient status and provides a consistent program for monitoring patient care. FitPeo Pathways pulls data from patients wherever they are through their mobile digital devices or at home through remote monitoring kits. This provides actionable insights to clinical staff for timely care interventions. FitPeo addresses the health needs of healthy, rising-risk, and high-risk patients, driving stronger adherence rates that improve population health and lower costs per capita.

MONITOR & ENGAGE

FitPeo offers constant monitoring and engagement of patients by leveraging a toolset that is convenient to use. This helps in driving positive patient response allowing for timely medical intervention useful in chronic & acute disease management.

CONSTANT STRUCTURING

Technology that points the way to go. Population analytics and intelligent algorithms, which can be integrated with health plan back-end systems, allow healthcare providers to assess at risk populations and decide where to focus their efforts. The technology can even identify trends in a patient's care management that allow for the FitPeo program to be altered or further customized, often helping to prevent costly escalations in care. Monitor patients smartly with FitPeo.

disease specific clinical approaches that can be personalized for every patient. These incorporate, however, are not restricted to:

- Congestive Heart Failure (CHF)
- Persistent Obstructive Pulmonary Disease (COPD)
- Malignant Growth/Cancer
- Hypertension
- Weight Management/Obesity
- Asthma
- Diabetes
- Torment Management

CONSISTENT EDUCATION

Healthcare starts with an engaged audience and an engaged audience is a well educated one. Our extensive, and easy to utilize content library educates and engages patients while improving wellbeing proficiency. Content creation and

Information recovery starts with high commitment levels. FitPeo has the best history of commitment in medical services. For instance, power your packaged consideration programs with preoperative evaluations, post-release observing, arrangement updates and consistent documentation. Feed this information back into your databases for quality feedback.

VIRTUAL VISITS

The whole concept of Remote Patient Monitoring is based upon, but not limited to virtual visits of a doctor. Being able to see a patient during a virtual consultation by virtue of a video call using modern devices like mobiles, tablets, etc. cannot be overemphasized in assessment of tele-health care. Members can get top notch healthcare at their fingertips.
