About us

According to a recent global survey conducted by McKinsey & Company, revenue increases as a result of adopting Digital Business Process Automation, or AI as it's commonly known, can exceed 10%.

Additionally, costs can potentially be decreased by more than 20% in some cases by implementing Digital Business Process Automation.

Any rules-based process in areas such as Marketing and Sales, Strategy and Corporate Finance, Supply Chain Management, Manufacturing, Risk, Product and Service Development, Service Operations, and HR can all be optimized by the adoption of Business Process Automation (BPA).

Valenta's Managing Partners are world leaders in BPA design and implementation for medium sized businesses.

With offices in 17 countries and over 400 staff and partners worldwide, we are ideally placed to help your business.

We provide customized solutions in Process Consulting, Digital Transformation, Staff Augmentation, Digital Marketing, and Learning.

All our services are designed to assist your business to improve competence and performance, while

reducing costs.

Businesses operating in fiercely competitive markets require a competitive advantage, and Valenta provides you with this through our vast knowledge and quickly accessible resources.

We have a diverse understanding of business practices across regions. With our experience and global presence, Valenta prides itself on the ability to understand in detail, the process dynamics of each business, and we will put together a specific solution that meets your growth objectives.

Speak to our expert team at (606) 225-8509 or visit valenta.io to see how we can help your business thrive.

In 2021, the market for artificial intelligence (AI) in marketing was estimated at 15.84 billion U.S. dollars. It is now projected that the value will increase to more than 107.5 billion by 2028. AI has become one of the most impactful digital innovations of the past few decades. The term refers to the ability of a computer or machine to mimic the competencies of the human mind, with the current ecosystem consisting of machine learning, robotics, artificial neural networks, and natural language processing. All of these features and algorithms are highly versatile and adaptable to the specific requirements of the user, explaining why they have become embedded into many different industries, ranging from telecommunications and financial services to healthcare and pharma.
