Web integration - Hosted Mode

The *hosted* mode is the quickest method to add Ramp Instant to your app.

Basic integration

Integrating Ramp Instant in *hosted* mode is pretty straightforward - the only thing you need to do is to redirect your user to `https://buy.ramp.network/` with mandatory mandatory configuration params. Note that this approach will work for both desktop and mobile integrations - no extra work needed! Just add a link to your app.

```html
<a
  href="https://buy.ramp.network?hostApiKey=your_host_apiKey&hostAppName=your_app_n
  target="_blank"
  >Go to Ramp Instant</a
>
```

If you want to set some custom options for your integration, just add them as query parameters to the URL.

For example, let's set a `userAddress` param so that it'll be prefilled for the user.

```html
<a
  href="https://buy.ramp.network?hostApiKey=your_host_apiKey&hostAppName=your_app_n
  target="_blank"
>
  Go to Ramp Instant
</a>
```

Now, when a user goes through the purchase flow, their crypto will be sent to the specified address.

A more detailed list of the available configurations with examples can be found here.
