 **VCM™**

**VIGIA Configuration Manager**

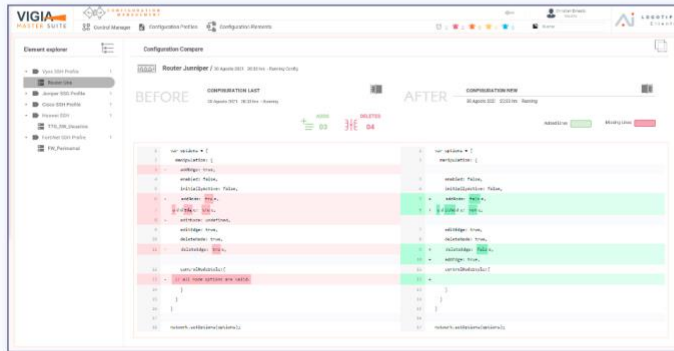

Is our Administration, Management and Control solution for existing configurations on each equipment, as well as changes and compliance with configuration standards in all network components.

Meet VCM™

## Capacity, in two broad senses

Our solution demonstrates capacity not only by its quality of being capable, but also by accumulating an enormous amount of information... and, in addition, configured (uploading) it.

VCM™ is the ideal complement to VIGIA® Network BUS® (VBUS™) and VIGIA® Advanced Algorithmic Suite® (VAAS™) both providing enormous flexibility as it is the only tool on the market capable of storing configurations of any device or platform integrated with VBUS® and make automatic copies of settings within a secure and encrypted environment.

## Outstanding Features

Configuration vs

Configuration  
Manager

Intuitive  
Interface

### Configuration vs Configuration

It allows to compare two or more configurations, having the ability to analyze:

- ⦿ Current configuration of a team vs. stored presets.
- ⦿ Current configuration of a team vs. standard or ideal configuration (GoldenConfig).
- ⦿ Configuration of similar equipment with similar services.
- ⦿ Proposed configuration vs base configuration.
