“...it’s like Google Earth; but in REAL-TIME...”

Tempest Droneworx is a software company dedicated to saving lives. Our flagship product, Harbinger aggregates real-time data collected from drones, satellites, static sensors, and crowdsourcing apps... presenting that data in easy-to-read 3D maps with a zero-training interface.

• **What is it?** The Harbinger system is real-time intelligence in the form of multispectral 3D maps available on multiple devices.

• **Real-Time?** YES! 3D maps using drones and other sensors are nothing new. But they can take hours, days, or even weeks to generate. Harbinger is unique because it’s real-time.

• **Why Does Real-Time Matter?** In emergencies, time-to-decision (TTD) is critical in preventing issues from becoming problems.

• **Multiple Devices?** Because Harbinger’s client is developed in a video game engine, anything from an AR monicle, to a mobile device, to a full command & control system on a supercomputer can view Harbinger data. And since it’s a game engine, the controls are familiar and require zero-training for the end-user.

• **What Special Equipment is Needed?** Harbinger is drone and sensor agnostic. So long as they meet our minimum specifications; any drone and/or sensor can be utilized.

The Story Behind Tempest

Our Founder, Ty Audronis is from Paradise, CA. On November 8, 2018 Paradise Burned, costing Ty’s childhood

home, 85 people their lives, and over \$10-BILLION in damages.

When Ty discovered that “modern”

methods for wildfire prevention are rooted in medieval technology (towers hundreds of miles apart searching for smoke signals), he was appauled, and the idea for Harbinger was born.

The Markets are Limitless

Both in public and private sectors, here are but a few (of the many) industries who we are currently in talks with:

• **Oil & Gas:** We are currently negotiating a pilot program for late 2023 with a West-Texas O&G company for volatile emmissions monitoring

• **Disaster Response/Recovery:** Harbinger is currently being evaluated by Lone Star sUAS Center for Excellence (1 of 7 FAA testing facilities) to fulfil their disaster response mandate imposed by the Governor of Texas.

• **Military:** We filed our direct to phase 2 SBIR applications with the support of USAF CRW and ATCS.
