Description Reviews (0)

【Ultra-High Conversion】 20% conversion rate. The solar-powered battery charger absorbs strong sunlight and converts it into 5 volt DC current to charge the battery.

【Reverse Protection】 Solar-powered battery charger protects itself and your device from overcharging, overvoltage, overcurrent etc. When the light is strong, the blue indicator lights up, which means it starts to work. In the dark, the indicator lights out and stops working.

【More Durable】 10W solar-powered battery charger covers super high efficiency PV glass, which is high transparency, low iron tempered glass, high strength, strong impact resistance, snow resistance and long service life.

【Easy Use】 You can charge your smartphone 2-3 times, tablet at least 2 times and other USB devices multiple times. Say goodbye to the anxiety of outdoor low battery.

【Low Maintenance】 Clean the glass surface after long use, and the power generation effect will be better. No need extra maintenance, no electricity, energy saving and environmental protection.
