### We Make Solar Power Easy!

A solar electric system generates valuable electricity and provides a secure return on investment. Solar panels generate electricity from sunlight with little or no maintenance. A solar panel installation pays for itself in the first years of operation and then produces no-cost clean electricity for decades.

Liberty Solar installs photovoltaic (PV) solar electric systems on homes, nonprofit buildings, schools, government facilities, and businesses. Our team is experienced, efficient, and well trained.

Financing options are available to help you go solar sooner. The quicker you install solar panels and start making your own electricity, the faster you will see a return on your investment.

We also offer wholesale pricing on solar panels, inverters, racking, and other equipment in the United States and Canada. Our high volume sales means low prices for solar installation customers.
