★★★★☆ **Build quality is great.**
Reviewed in the United States on June 5, 2024
Color: C64 Edition | Verified Purchase

The colorway is great, and matches the original C64 well. The switches are not cherry, but at least I can replace them when needed or desired. That said the Kailhs actually feel really good (I have just had failures in that brand of switches in the past).

The joystick and buttons are quaint, and really awesome due to the way they can be programmed to mimic keypresses.

I don't even use the wireless features, but the keyboard is worth it without.

I would almost have paid that for the keycaps alone... which, although not signature plastics or GMK, are still decent with a nice sound and good feel.

★★★★★ **A great nostalgic keyboard for the price.**
Reviewed in the United States on June 7, 2024
Color: Fami Edition | Verified Purchase

I bought this keyboard because I was looking to build a nostalgic custom for several hundred dollar, then I found this beauty for only 99\$.

Out of the box, this thing is simply a treat. It's colorways just nail it, and bring back that old Nintendo nostalgia (I myself indulged in the Famicom variety). It has rubber-sleeved cables, which for a product like this is actually a boon, because the rubbers sleeves feel just like the controllers of old. Just as well there are the power buttons, which plug in via a 3.5mm jack at the back of the keyboard and really drive the message home. All around great presentation; it's thematically perfect.

Then comes build quality. The board does feel a little hollow. It has a plastic shell, and no inner foam layer to fill things out (at least it doesn't sound or feel like it does, I don't really know for sure). However, it does have an aluminum plate which helps provide a good amount of thock, and the keycaps are dye-sub PBT which give them a nice noise that's on the lower side of the register.

★★★★★ **Good keyboard, but not for Linux.**
Reviewed in the United States on September 22, 2023
Color: Fami Edition | Verified Purchase

The Good:
The keyboard is fairly cheap considering the specs, and I think it is very impressive considering. The key switches seem to be Kailh box v2 white's (or a close clone) but not 100% on that, hopefully someone else reviews who can be certain.

The 2.4GHz has no perceivable lag or dropped inputs, I type around 120WPM at 100% accuracy and couldn't tell anything was off.

Bluetooth was easy to set up and pair, although only got it to work on Windows and Android. I use Linux and it refused any inputs, hopefully a new driver can fix that in future but for now don't buy it for Linux+Bluetooth unless you can dig deep to find out why.

Binding the macros is easy, the "big buttons" and the two little A and B buttons where the context-menu and right-super/windows key would normally be are set up the same way, just press the bind button at the

★★★★★ **solid keyboard, few things to note**
Reviewed in the United States on June 1, 2024
Color: Fami Edition | Verified Purchase

this keyboard sounds pretty nice out of the box, clicky, makes nice noises (atleast in my opinion), responsive and does the job. looks very nice. i cant comment about the bluetooth because i dont use it.

i can say if you're buying this in hopes to mod it, good luck, the screws are under the rubber feet but i've had no luck getting them out... so my only peeve with this is how hard it is to take apart the keyboard.

the space bar sounds a little hollow but i shoved some foam into the keycap and it sounds a little better.

the last thing is the mini controller thing was broken when i got it, which wasn't a big deal because i didn't buy it for the controller.

i think itd be nice if a keycap/switch puller was included.

For reference, upgrading from an Anke Pro II keyboard.

Okay, so sure, there aren't any flashy RGB lights, but it's a 'retro' keyboard, and they didn't have that back then. And to tell you the truth, the whole 'assignable RGB' thing gets old after you've had it for a bit. That being said,

I already have a device from 8BitDo, the original NE330 controller you see in that pic. And that controller is like over a decade old now and it still works just as good as the day I got it...of course the battery life is not as good, but still get 1.5 hours of play without a USB cable for sure.

So, when I saw this keyboard come out, it was not even a tough decision. I saw 2 key things:

Mechanical board

Kailh branded clicky & tactile switches

Best I can describe the feel and audio of the keystrokes...like a Commodore 64, but brand new, like the diy you get it, with a slightly muted rebound sound on the release. Clicky, but not 'treble' clicky, more of a

Sieht gut aus, fühlt sich wertig an. Das hohe Gewicht hätte ich nicht erwartet - nice. Klicken und Druckpunkt gefällt, da habe ich aber keinen Vergleich zu anderen mechanischen Tastaturen.

Die Software könnte besseres UI haben, aber man bekommt es hin. Ist aber auch egal, da man da ja nicht oft dran muss.

An das US Layout muss man sich etwas gewöhnen, aber das wollte ich sowieso weil das beim Programmieren von Vorteil ist. Ich empfehle nach "EURKEY" zu googeln, dann kommt man auch an die Umlaute ran.

Die extra großen Buttons und den Joystick habe ich nur kurz probiert, funktioniert habe aber noch keine Verwendung dafür. Für kurze Spiele wird es reichen, auf Dauer wahrscheinlich nicht so ergonomisch.

Für Nostalgiker ein muss.

I like.
