RAPTOR™ TECHNOLOGY

Lethal by design.

This picture of a .416 caliber 325gr DGBR-HP is a classic example of what all of our RAPTOR bullets are designed to do. The top portion of the bullet blows off into six petals and moves away from the main wound channel in a star pattern creating a massive amount of trauma.

This witness card was embedded into wet pack medium at 4" deep. The smaller caliber bullets petals tend to stay closer to the main wound channel but still create massive amounts of damage.
