

CDM Software Solutions

Try Reason free, with the Sample dataset, then edit those 24 items (maximum allowed in this trial version).

[Try Reason now](#)
[Buy Reason now](#)

Dynamic data tables you create and model - at close to the speed of thought - to examine every possible permutation in the context of your own personal knowledge, values, experience, skills, intuition, and imagination to yield the optimum association (or group of alternative hypotheses) of the listed items. Reason datasets are designed by you, and patented automated sorting generates the multiple views from which you pick and choose, editing parameter values as you wish, and using colors to distinguish parts of the table to aid your reasoning.

[Download I-TRAC \(Free\)](#)

A legacy CDM program not supported by Vista, I-TRAC tracks issues with 4 parameters: names of the issue each listed action supports, type of action, assigned to, and date due - for as many issues and related actions as you wish. Manual sorting to examine the 24 permutations led to our patent for automated sorting.
