System and Application Management Learning Center

With easy access to multimedia presentations and demos, learn how Sun N1 management software can simplify your IT operations and accelerate deployment of your business services.

Overview

Sun N1 management software enables IT managers to respond quickly to changes in business requirements and customer needs. Using N1 software, companies can reduce time-to-market and operating costs by automating time-consuming and error-prone datacenter operations.

You can [download the N1 software now](#) and use it at no cost.

For more information, visit the [Sun N1 Software homepage](#).

Sun N1 System Manager

N1 System Manager provides comprehensive system lifecycle management for Sun servers. It simplifies the discovery, provisioning, monitoring, and management of local and remote servers from a single web console. Its innovative hybrid user interface gives IT staff choice and flexibility to optimize their productivity.
