

PRAETORIAN

SECURITY IS ELUSIVE, WE ARE VIGILANT

- Software Security**
Evaluate your applications security over its entire development lifecycle.
- Security Assessment**
Measure the overall strength of your company's security program.
- Digital Forensics**
Neutralize a security breach through proper incident response.
- Security Training**
Learn in a classroom environment from the experts.

The Security Experts

Praetorian is an information security consulting firm that provides risk assessment, penetration testing, secure software development, computer forensics, and security education services. Our goal is to help our clients minimize their overall security exposure and liability. Through our services, your organization can obtain an accurate, independent security assessment.

As an independent security firm, Praetorian builds its reputation on our expertise, integrity, professionalism, and client satisfaction. As a boutique firm, Praetorian must distinguish itself by the quality of its service and the technical prowess and business acumen of its consultants. Subsequently, Praetorian only considers the top five percent from the security industry for employment. Our consultants come from a wide range of backgrounds and specialties. All consultants come from a computer science or engineering discipline and many consultants have obtained masters and doctorates. Our team members include published authors, open source developers, industry researchers, and conference presenters.

VENDOR NEUTRAL

Highlights

OWASP LASCON SPONSORSHIP
Praetorian is proud to announce they are sponsoring the OWASP LASCON conference held October 29th in Austin, TX.

ADAM PRIDGEN SPEAKS AT DEFCON 18
Adam Pridden gives a lecture on toolsmithing an IDA bridge, a case study for building a reverse engineering tool

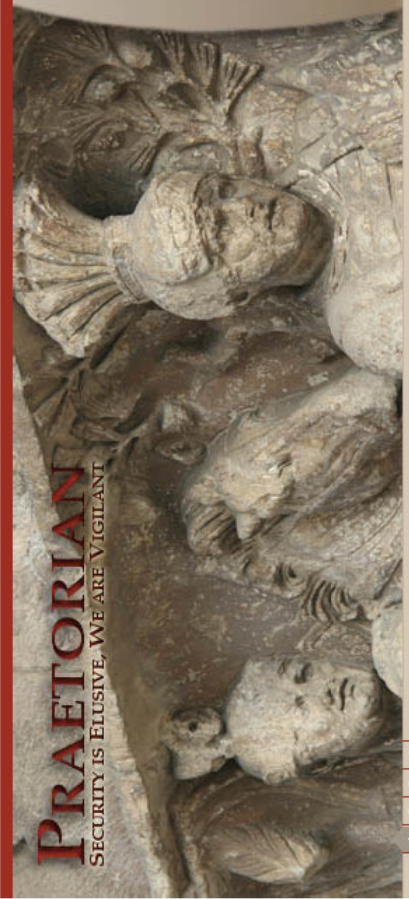

BOOK DEBUT
Nathan Sportsman is a contributing author to new edition of the book

SPEAR-PHISHING ATTACKS OUT OF CHINA TARGETED GOOGLE, ADOBE, AND OTHER U.S. COMPANIES
Attackers used intelligence, 0 day exploits, and custom malware to target more than 20 U.S. companies... [Read more](#)

CLIENTS INCLUDE

- 
Software Security
 Evaluate your applications security over its entire development lifecycle.
- 
Security Assessment
 Measure the overall strength of your company's security program.
- 
Digital Forensics
 Neutralize a security breach through proper incident response.
- 
Security Training
 Learn in a classroom environment from the experts.

Services

Praetorian consultants come from a strong software development and network security background. We leverage this experience to bring the proper insight and perspective to bear on your unique environment. Contact our sales team to discuss any of our service lines and develop a customized solution for your needs.

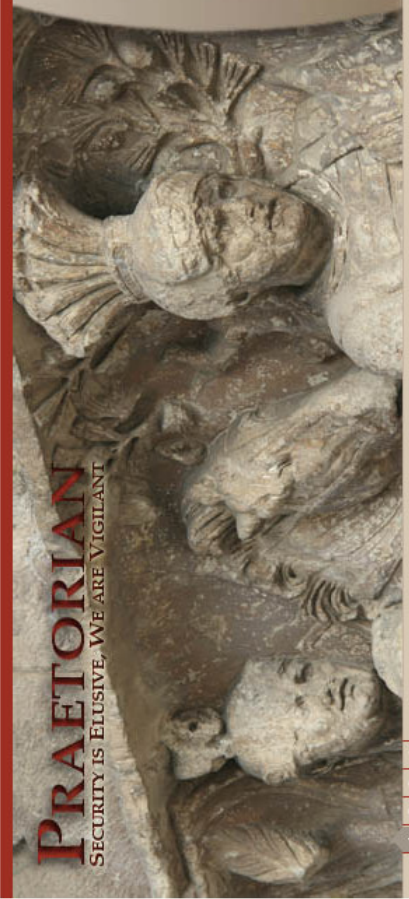

DIGITAL FORENSICS

Even organizations that institute proper security controls and take appropriate security measures can find themselves scrambling after a security breach. When performing damage control we work along side your staff to ensure your company has the information it needs over the course of the investigation. Praetorian's investigative and technical expertise provides effective mitigation and remediation of a security compromise.

REGULATORY COMPLIANCE

Regulatory compliance is often the primary driving factor behind many of an organization's security initiatives. State and federal laws as well as industry requirements are leveraging fines and penalties in an effort to move companies in the right direction when it comes to protecting sensitive information. Out of touch legislation and ambiguous language introduces considerable headaches for responsible organizations seeking compliance. Praetorian provides compliance development and assessment services to ensure an organization's efforts are both meaningful and effective. Offerings are tailored for PCI HIPAA FERPA SOX and GLBA.

DIGITAL FORENSICS

Even organizations that institute proper security controls and take appropriate security measures can find themselves scrambling after a security breach. When performing damage control we work along side your staff to ensure your company has the information it needs over the course of the investigation. Praetorian's investigative and technical expertise provides effective mitigation and remediation of a security compromise.

REGULATORY COMPLIANCE

Regulatory compliance is often the primary driving factor behind many of an organization's security initiatives. State and federal laws as well as industry requirements are leveraging fines and penalties in an effort to move companies in the right direction when it comes to protecting sensitive information. Out of touch legislation and ambiguous language introduces considerable headaches for responsible organizations seeking compliance. Praetorian provides compliance development and assessment services to ensure an organizations efforts are both meaningful and effective. Offerings are targeted for PCI, HIPAA, FERPA, SOX, and GLBA.

SOFTWARE SECURITY

Whether your software is an Internet-facing web application or an enterprise system management application, security is a critical piece that needs to be considered at each stage of the development lifecycle. All of our consultants come from a software development background. Leveraging that experience, we can work with your development teams to provide a security perspective, enabling you to prevent exposure at the source: within your source code. Regardless of where in the development cycle you are, we can help through one of the following services: [Requirements Review](#), [Threat Modeling](#), [Code Review](#), [Security Testing](#), and [Secure Software Development](#)

SECURITY ASSESSMENT

Through time tested, thorough methodologies, our consultants assess your security exposure and provide mitigation strategies, and assist in remediation efforts. A comprehensive security assessment can have many facets. Engagements are scoped to include one or more service lines depending on the needs of the client.

SECURITY TRAINING

Praetorian brings real world experience into the classroom. Coming from enterprise commercial software vendors, our consultants have been on both sides of the fence and understand the challenges your developers face. Our training classes are designed for an intense, interactive, and hands on experience to ensure attendees get the most out of the time they spend mastering a particular subject.
