HISStory

HIS are the innovators of cosmetic scalp pigmentation to create an effective, permanent and hassle-free hair loss solution. Our Micro Hair Tattoo (MHT™) scalp pigmentation technique is internationally recognised and our experience, expertise and results are widely regarded as being the best in the world...

We are proud to be recognised as the first company in the world to have specialised in a range of cosmetic scalp pigmentation techniques to positively camouflage hair loss. We have spent many years developing our MHT scalp pigmentation [techniques](#) which are an effective, [innovative](#) non-surgical treatment for hair loss sufferers. Our results leave you with consistent hair replications and micro hairs that simulate real hair creating a natural cropped “buzzed” hair style that is perfect for [today’s modern stylish man](#).

As owners and Directors both Ian Watson and Ranbir Rai-Watson are [professionally qualified](#) in permanent cosmetic tattooing, medical tattooing and general body art tattooing. We have undergone intensive training in the UK, including at [Harley Street](#) in London with some of the world’s foremost permanent make-up experts, endorsed by the Cosmetic Surgery and Aesthetics Industry and accredited by government trainers and assessors. We have also undertaken advanced training internationally in Australia, and have been privileged to receive one to one training with a multi award-winning creative tattoo artist in the UK.

We are not a high street hair dresser, a [permanent make-up](#) or beauty centre or a tattoo studio. We are a dedicated hair clinic with a professionally qualified team of hair loss experts. We’ve developed our [MHT™ scalp pigmentation treatment](#) using a sophisticated blend of science and cosmetic creative flair in the specialist field of scalp tattooing. MHT™ scalp pigmentation treatment is unique, the techniques are safe, the results are instantaneous and represents exceptional [value for money](#) in comparison to other surgical and pharmaceutical [hair loss treatments](#).

We are fully aware and extremely sensitive to the needs of all hair loss sufferers and our [clinics](#) are designed to provide an exclusive and private environment. The advice, treatment and service we provide is totally confidential and dedicated to you. With us, you will experience much more than just a head tattoo, you receive a hair loss treatment consisting of a high-quality, clinically-proven procedure, excellent levels of customer service and our constant quest for perfection.

We are very proud to have helped [many people](#) around the world suffering from all types of [alopecia](#) (including scalp / skin disorders), as well as successfully camouflaging hair transplant and other [scars](#). We set up HIS to offer support and help to all hair loss sufferers; we are genuinely here for you should you require our assistance.

Check out our online [forum](#) for stories of some of our satisfied clients – or discuss our procedures in more detail with them or us online.

We have clinics in [London](#), [Birmingham](#), [Manchester](#), [Cardiff](#), [Glasgow](#), [Malaga](#) and [Marbella](#). We are registered, insured and accredited with the appropriate authorities, meeting all necessary health and safety legislation. We are proud members of the following professional associations:

Hair Loss Treatment for Men

MHT™ scalp pigmentation treatment is an innovative hair loss treatment for men, leaving you looking as if you have real hair. You believe you have hair and so does everyone else, it truly is amazing...

We believe that the MHT hair loss treatment for men provides the ideal solution for men worldwide who are suffering from hair loss. Of the solutions available, none are as immediate, permanent, realistic, hassle-free, non-invasive and cost-effective as the globally recognised MHT hair loss treatment for men.

Furthermore, you may have already had some form of hair loss treatment and remain dissatisfied with the results. For example, many of our clients approach us as they're unhappy with a hair system or wig and want to remove it, possibly for hygiene reasons or damage caused to the scalp by the adhesives used to hold the system in place. Perhaps you've had hair transplant surgery and there was insufficient donor hair to cover the required area, or you've been left with scarring that you would prefer to be camouflaged. Maybe you've been taking medication and have been experiencing unacceptable side-effects.

If you would like to take action against your hair loss problem please continue reading. If you have any questions please do not hesitate to [contact us](#).

What is the MHT™ hair loss treatment for men ?

MHT scalp pigmentation is a highly sophisticated treatment based on a very specialised scalp tattooing procedure. When performed by an expert practitioner, MHT creates an incredibly natural looking simulation of micro hairs on the scalp.

For sufferers of regular hair loss or some form of alopecia, MHT offers an extremely effective cosmetic hair loss solution. Competent application of the MHT technique results in the appearance of a short, cropped hairstyle, regardless of your current hair loss situation. Even clients who were completely bald before coming to HIS Hair Clinic now have a natural looking hairstyle again!

Whilst the thought of a tattoo-based treatment for hair loss may seem a little unorthodox at first, it is important to recognise that the MHT hair loss treatment for men technique is a far more sophisticated process than a regular tattoo. The equipment we use is entirely different, as are the needles and pigments, and the technique itself is highly specialised and requires years of training to perfect.

The MHT technique involves no surgery, no scarring and no hair pieces. Very little ongoing maintenance is required, although many of our clients do return to our clinic from time to time following treatment to adapt their new style.

Our consultations and treatments are backed by our unrivalled knowledge and experience of the scalp pigmentation process, and our world-leading client aftercare and support programme.

For further information about our hair loss treatment for men technique and the process, see our [MHT Technique](#) page.

How can the MHT™ hair loss treatment for men technique be applied?

MHT™ can be used effectively to treat all types of hair loss in men, including thinning hair, lost hairlines and lost sideburns or side profiles. The technique is applied differently depending on your circumstances and preference. The most common MHT applications are detailed below:

Receding hair

MHT is an ideal solution for those experiencing natural hair loss. Usually caused by a condition called Male Pattern Baldness, the 'horseshoe' effect is common where the hairline is pushed backwards, particularly on each side of the frontal hairline. MHT enables the hairline to be redefined, resulting in a natural, more youthful appearance.

For case studies where we have applied the MHT technique to cover a receding hairline please see Taz, Jon T, Carter, Brian, Richard, Dwayne, Eddie, Adam, Surj, Howard, Dani, John, Nesta and Mike in our [Gallery](#).

Balding of the crown

Another common form of Male Pattern Baldness is where hair loss is most prevalent on the top of the head towards the crown. Of all the many forms of hair loss in men, a balding crown is arguably the one that has the most significant effect on a person's perceived age. Again, MHT offers the ideal solution by making the hair on the head appear more evenly distributed, camouflaging baldness and producing a new, younger looking style.

For case studies where we have applied the MHT technique to cover a balding crown please see Chris, Nigel, Calvin and Paul in our [Gallery](#).

Complete hair loss

The onset of hair loss in men often happens very quickly indeed, or in other cases can take years to affect the entire scalp. We regularly treat clients who have no hair left at all, and it is in such cases

that our clients notice the most dramatic difference not only to their appearance, but also their confidence and self-esteem. By not having any existing hair, these clients have a wide variety of options available to create exactly the appearance they want to achieve.

For case studies where we have applied the MHT technique to the entire scalp please see Vince, AJ, Geoff, Tomas, Mr Kahn, Aaron, Raj and Shakeel in our [Gallery](#).

Hair loss caused by alopecia

Alopecia can indiscriminately affect any area of the scalp, often in several areas of varying sizes and severity. The onset of hair loss is often sudden, random and frequently recurrent. Prior to MHT™ there was no real alopecia treatment available. It is important to note that alopecia is not detrimental to a person's health, however it can have a significant impact on their confidence.

At HIS Hair Clinic we have an excellent track record of treating clients suffering from many forms of alopecia. For more information please see our [alopecia treatment](#) section.

Camouflaging scars

We treat many clients who wish to cover scars, most commonly following a hair transplant procedure. Such procedures often leave scarring, therefore we offer MHT to clients following surgery either retrospectively, or as a planned compliment once the surgery is complete and the scars have had the opportunity to heal. For more information please see our [scar camouflage](#) section.

For case studies where we have applied the MHT technique to cover hair transplant scars please see Jason, Andrew, Jeff, Chris B, Joey, Scot and Mark in our [Gallery](#).

Fundamentally, our MHT hair loss treatment for men can be applied to any area of skin that has shed hair for whatever reason. We have treated hundreds of customers from all over the world, and we are yet to find a situation where we have been unable to provide a solution.

What results can you expect from MHT™?

The MHT hair loss treatment for men technique is designed to replicate real hair, worn in a cropped or close-shaved hairstyle. Whilst we do our best to demonstrate our results via photographs on this website, we often arrange for prospective clients to meet those we have already treated. This enables the client to see the results for themselves, as only in the flesh can the detail and the realism be truly appreciated.

This site features a full Gallery section to showcase our results. We respect our clients right to privacy therefore we only display photographs on our site with our clients permission. In this section we have included before and after photographs of treatments applied to all client skin types including pale white, tanned, Hispanic, Middle Eastern, Asian, Oriental, African and Afro-Caribbean.

Many of our past clients still haven't told their friends, family and work colleagues that they've had the treatment performed, and usually they have no intention of doing so. We have numerous clients who haven't even told their spouse, yet the treatment remains un-noticed, in fact many of these clients completed their treatment as long ago as 2005 without comment nor question since.

Whatever your circumstances or desired outcome, our aim is to meet your individual expectations and we measure our success based on your satisfaction. We are perfectionists when it comes to hair loss solutions, working with you to achieve a natural, modern style that suits you. We provide excellent advice, treatment, [aftercare guidance and support](#) throughout to ensure that you are looked after every step of the way. Don't just take our word on this – ask some of our [previous clients](#) in our [forum](#).

Is MHT™ the right solution for you?

If you suffer from hair loss and have decided to take action, there is a bewildering range of solutions available from wigs, concealers, lotions and supplements, and even surgery.

Most of our clients have tried several alternatives by the time they contact us, in fact the very reason they contact us is because they're unhappy with the results they have achieved thus far.

We believe our MHT hair loss treatment for men offers a solution that should be seriously considered versus other options:

Hair transplant surgery

A surgical procedure using donor hair from other parts of the body. Can be painful following surgery and can produce scar tissue, depending on the type of procedure carried out.

Wigs

Often called hairpieces, systems or units, a wig provides an instant solution, however they do require maintenance which can be expensive. Some users find hair systems difficult to live with, feeling that the inability to remove them at will can cause concerns about hygiene. There is also a social stigma attached to the wearing of wigs, and many users live in fear of being 'found out'.

Concealers

Spray-on, shake-on or brush-on concealers for hair loss is a multi-billion pound marketplace worldwide, but fundamentally none of these products offer a permanent solution. Depending on the product bought, many can be rained off, sweated off or inadvertently brushed off. That said, temporary concealers have come a long way since their introduction, and are significantly better than they used to be.

Lotions and supplements

There is a huge range of topical lotions, supplements and pills available, each claiming their own set of benefits. Whether or not they work is a matter of personal opinion, as results vary considerably from one person to the next. Potential side effects should also be a consideration, as a large proportion of users have experienced anything from a slightly itchy scalp to reduced semen production and erectile dysfunction.

When choosing a solution for your hair loss problem, only you can decide what is the right option to take. Consider any maintenance commitments, how the solution may affect your lifestyle, what degree of intervention you're willing to tolerate, and of course the cost before deciding one way or another, as your decision is one you will have to live with.

What support can you expect from HIS Hair Clinic?

We have successfully treated many clients from all over the world, who have testified to the efficacy of our MHT™ hair simulation treatment, with the MHT™ techniques [pioneered](#) and expertly practiced at our [clinics](#).

[Pioneered](#) by the [founders of HIS](#), and after many years of development, HIS treat patients from all over the world including the United States, mainland Europe, Africa and Asia. MHT™ hair simulation treatment is effective, quick and in many cases life changing.

HIS understand the decision to have any hair loss treatment is a significant one, and we have a comprehensive, thorough process that ensures you have support and that your questions about the Micro Hair Tattoo process are answered every step of the way. There is no obligation. After your free initial consultation, the decision lies entirely with you.

For more information about how we support our clients please see our [Aftercare](#) and [Hair Loss Counselling](#) sections.

To find out if our minimally invasive MHT™ hair loss treatment for men is right for you, why not arrange a free consultation with one of our dedicated MHT™ Hair Loss experts? You can do so either by calling us directly on **0845 604 4618**, e-mailing us at info@hishairclinic.com, or arranging a free on line [Skype consultation](#). We would also recommend seeing a GP, Trichologist or Dermatologist before deciding on your treatment.

Why Choose HIS Hair Clinic?

HIS are a professional hair clinic dedicated to providing an innovative and cosmetic treatment for hair loss.

Our core values are that we act with honesty, integrity, empathy and unsurpassed quality. We are a customer focussed and caring company and we take a professional approach to everything we do from being members of the chamber of commerce to our professional associations and professional memberships.

As the original [pioneers](#) of this type of cosmetic treatment we have fully developed our own professional MHT™ process. A period of more than eight years has been used to fully understand, assess and gain expert knowledge and technical know how of exactly what happens to the treated area of scalp over this sufficiently long period of time.

Clinical trials supported with clinical evidence over this time frame were absolutely necessary in order to successfully take our innovative idea from an initial concept to establishing a fully developed process that ensures consistent repeatability of flawless results.

The worlds first and only qualified, experienced MHT clinic

[Ian Watson](#), Managing Director of HIS Hair Clinic and co-founder of the MHT™ brand was subject to the worlds first MHT™ treatment, therefore as an ambassador for the MHT™ technique, the results are there for all to see. Since then, the technique has been tested and refined in order to be able to prove the treatment is completely effective, since regular tattooing inks applied using traditional techniques have the tendency to change colour and migrate under the dermal layer of the skin over a period of time.

Our clinicians approach to our MHT™ scalp pigmentation treatment is a sophisticated blend of science, creativity and cosmetic artistic flair. This means you receive safe treatment with [excellent aesthetic results](#). All of our MHT™ scalp pigmentation experts are fully qualified in permanent cosmetic tattooing and medical tattooing having undergone intensive training.

As the original developers of the MHT scalp pigmentation technique, HIS Hair Clinic offer an unsurpassed level of knowledge and experience. As our MHT™ technology has grown in popularity and subsequently been subject to extensive media coverage, other practitioners have started offering their own interpretations of scalp pigmentation treatments with varied success. We have no desire to discredit the efforts of other companies, in fact we welcome healthy competition, however concerns have been raised about the practices and end results achieved by a handful of such companies.

As HIS developed the technique in the first place, we justifiably claim to have more experience, more knowledge and a more accomplished technique than anyone else anywhere in the world. Over time, our [clients](#) have become our most prominent marketeers, spreading the word on our behalf about their experiences with HIS and the [positive impact](#) their MHT™ treatment has had on every aspect of their lives due to increased confidence and self-esteem. For further information we urge you to search the internet for HIS Hair Clinic reviews for independent verification of our results.

HIS work in conjunction with a team of expert medical practitioners, qualified pharmacists and leading hair loss advisors. These individuals act as healthcare and hair loss consultants to provide expert advice and ensure the very best possible treatment for our clients.

Beware of copycat practitioners

As our MHT technique has grown in popularity, other clinics and independent practitioners have tried to emulate our process. MHT is a highly specialised technique that has taken many years of intensive training, alongside some of the world's foremost experts, to perfect. The use of scalp pigmentation techniques as a solution for hair loss, should not be practiced by regular tattoo studios, permanent make-up practitioners or clinics with insufficient knowledge or experience, under any circumstances.

The image shown is of Raphael, a client who came to us, desperate for our help following a rogue treatment. Raphael is unfortunately, a classic example of why only suitably qualified, experienced practitioners should offer scalp pigmentation treatments for hair loss. For Raphaels story, [click here](#).
