The Core consists of:

Order Management Inventory Management Warehouse Management	Purchasing Financial Management Reporting and Analysis
--	--

Order Management features one-screen quote and order entry, and pricing and availability functionality. But that's just the beginning. This part of the core system streamlines the order management process and allows for easy access to all of the following:

- Order Entry
- Quotes
- Release Schedules
- Canceling Orders
- On-The-Fly Options
- Order and Line Notes
- RMA Entry
- Shipping
- Pick Tickets
- Sales Pricing
- Reports and Inquiries

Inventory Management enables you to decrease inventory levels while increasing customer service. This part of the Core system provides maximum flexibility to cut the fat from costs. You'll be able to lower carrying costs, minimize excess inventory, all the while improving cash flow and increasing satisfaction for both customers and employees by making everything quick, easy and efficient. This one-stop solution captures information on inventory changes, allowing for accurate data when making purchasing decisions. Distributors with multiple branches benefit from Venture's ability to transfer items between branches and track item usage at the local level.

- Quick Lookup
- Item Maintenance
- Item Notes
- Item Code Aliases
- Customer Part Number Maintenance

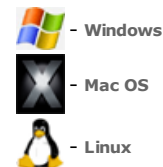

Warehouse Management - With real-time control of all stock transfers between locations, Warehouse Management will minimize inventory losses, reduce the number of shipping errors and consequently, increase profitability. Efficient and invaluable, this part of the Venture Core not only tracks stock, but also keeps track of stock levels after sales have been processed, automatically generating pick tickets without re-keying information. A huge time saver!

- Stock transfers
- Shipping & Receiving
- Inventory Count Procedures
- RF & Warehouse automation tie-in with API
- FedEx, UPS, DHL and other shipper integration

Purchasing - All purchasing information in one location means efficiency and flexibility. It optimizes buying power while making sure unnecessary purchases are kept to a

minimum. A variety of purchasing options can easily be controlled by numerous people, in realtime, so as to avoid "crossing the streams" of information. Venture manages substitute vendors and direct ships, allowing you to adjust processes as needs change. Quickly figure costs and profit margins of items by computing the landed cost of items, and figure consistent freight costs for items by weight and quantity to provide accurate data on which to base pricing.

- Suggested buy/Auto buy
- Goal seek buying
- Cargo container cube based buying
- Min/Max, usage rating and other buy methods
- Sales order to auto PO generation (direct ship)

Financial Management allows for up-to-the-minute financial statements, giving you a better handle on your company's financial status on a day-to-day basis. Handling both Accounts Receivable and Accounts Payable, this part of the Core tracks outstanding invoices and provides for easy viewing of outstanding balances. By integrating receipts and purchase order, the whole process is streamlined, and that usually means saving in both time and money.

- Accounts receivable
- Accounts payable
- General ledger
- API control for check writing and payroll GL integration

Reporting and Analysis allows for easy transformation of raw data into useable business intelligence. You'll be able to summarize key data and in turn, identify trends and forecast future needs. The need to print out this information and store it in bulky file cabinets is eliminated - you'll be able to view past and current reports at any time based on user permissions that will be easily set up by your system administrator. This valuable data can be shared with all employees in either email updates, native Excel spreadsheets, XML and can be printed out as formatted PDF. It'll be easy and quick to view and share sales summaries, inventory levels, accounts both payable and receivable, customer data and open and past orders. All in one centralized location.

- SQL report writer builds reports and macros
- Permission based
- Menu based options for standardized reports
- Public schema browser
