Our take on the XpressKit DLPKKICH3 Interface Module

by Ken Nail

PYTHON.

XpressKit modules work with your vehicle's anti-theft system to incorporate the convenience, security, and luxury features of your Python™ alarm system.

An XpressKit interfaces with vehicles using an "immobilizer" key system, allowing you to route commands through your vehicle's data system, so your signal's more secure. You have fewer wires to connect and, best of all, your extra key stays with you, not in your car.

Use the DLPKKICH3 interface module to control the door lock and factory alarm settings on select 2004-up Chrysler, Dodge, and Jeep vehicles equipped with factory anti-theft systems.
