What is xR?

xR™ is the method of naturally restoring what your body is missing, and our name comes from the mirror image of the traditional symbol for prescription "Rx".

We are at the forefront of helping medical professionals practice medicine and our forward thinking network believes that when xR and Rx work together - the patient's health wins! xR's method is to integrate genetic testing, bio-identical hormones, nutrition and lifestyle management to create **your natural prescription** under the care of a qualified healthcare provider - and as you will experience, this is nothing like you've seen before.

If you reflect about relationships with traditional "Rx" physicians, most of us typically see them every 6-12 months and for only a few minutes. Unfortunately this is a symptom of our traditional medical system, which we believe does a great job of providing "SICKcare", but doesn't focus enough on our "HEALTHcare"!

With xR, a partnership is formed between you, your Provider, and xR to continuously monitor, modify and maintain **your natural prescription** as your body responds over time. It is an exciting and continuously evolving process that allows you to take control of your health and work with experts and professionals to maximize your quality of life.

If you are experiencing any of the following conditions or your current medications and/or treatments aren't cutting it anymore - you have

found the right place.

- ADHD (Includes Children)
- Allergies
- Anxiety/Depression
- Arthritis/Join Pain
- Auto-Immune Conditions
- Bone Loss
- Erectile Dysfunction
- Fatigue
- Fibromyalgia
- High Cholesterol
- Insomnia
- Menopause
- Migraine

How xR Works:

Everyone is different and should have their own natural prescription. Discover how this simple, detailed & collaborative process helps you restore what your body is missing.

1 Tell Us About Yourself

The first step is to complete your Personal Health History. There, you will answer questions about your overall health history and describe the conditions for which you want assistance. There is no obligation after completing the process and, naturally, your information is 100% confidential. To begin this process, click the "I'm Interested" button in the upper right hand corner.

2 Laboratory Testing

In order to get your body's into balance, we need to discover where your levels are today. We will recommend which laboratory tests should be performed based on your Personal Health History.

As a rule of thumb, if you are experiencing basic aging symptoms like fatigue, erectile dysfunction, moderate migraine (< 5 per month) and menopause, then standard lab testing combined with hormone profiles will be recommended (which may be covered by your insurance).

However, if you are experiencing severe migraine, severe allergies, ADHD, auto-immune conditions or have a combination of symptoms - it may be necessary to perform genetic and/or more detailed testing (typically not covered by insurance).

We will help coordinate the necessary laboratory testing with your healthcare provider and an xR specialist will be available to answer any questions for you.

3 Receive your natural prescription™

xR will review your laboratory test results and Personal Health History and create **your natural prescription**. It typically consists of bioidentical hormones, vitamins, minerals and supplements. Your natural prescription is then recommended to and approved by your healthcare provider for you to begin.

We may have qualified xR healthcare providers in your area, however in many cases, we are able to work with your physician and please discuss this with an xR specialist.

4 Start your natural prescription™

Once approved by your healthcare provider, our staff will help you order your products and any prescriptions required from a compounding pharmacy. They will be delivered directly to your front door with easy to understand instructions. If you ever have any questions, our medical assistants and client care staff are here to support you.

5 Monitor, Modify & Maintain

With xR, you have access to your online chart which connects you, your healthcare provider and xR so that we can work together to modify, monitor, and maintain **your natural prescription** as your body responds.

This helps make the process more efficient because you will not have to go in for an office visit for every modification; however, you still should follow up with your healthcare provider as directed.
