

SneakPeek: The Next Generation
in Gender Testing using
Quantitative PCR to
Detect Your Baby's DNA

How it works

SneakPeek® utilizes the natural process of shared fetal DNA circulating inside the mother's bloodstream. From the small sample of blood you supply via a finger prick our lab is able to test for the presence of the male Y chromosome. High tech PCR instruments provide us with the ability to identify with over a 99% accuracy rate if it is present or not. If it is detected then the baby's gender is male and if it is not detected then the baby's gender is female.

Why SneakPeek®

SneakPeek® is the fastest option available delivering expedited high-speed DNA lab test results in under 72 hours from the time you place your order. Lab results are processed in our streamlined FastTrack Lab capable of unprecedented turn around times without ever leaving your home.

Our lab accuracy

Gender prediction with a 99% accuracy in as early as 9 weeks into pregnancy.
