

Equipment Advisory Service and Evaluation (EASE™)

EASE™ is a fundamental part of a comprehensive Service Agreement offering by Dresser-Rand. The notion that “you can’t improve something if don’t measure it” is at the heart of our *EASE™* condition monitoring program.

By using a client’s existing control system operating data we are able to make measures and provide information that otherwise would not be available. The ability to gather this information remotely and apply proprietary techniques and methods makes *EASE™* a valuable tool used to improve machinery reliability and efficiency.

As an integral part of the *EASE™* program a “**Site Services Manager**” (SSM) is appointed to provide expert client consult using the information provided by a monthly *EASE™* report.

Service Agreements with Dresser-Rand’s field service teams providing condition driven maintenance activities driven and *EASE™* derived “**Management Ready Information**” provide unparalleled opportunity for measured machinery improvement.

Management ready information is information gleaned from operating data and other sources that are actionable. Often time’s businesses have a lot of data but very little information. Dresser-Rand’s A+ team converts that data into information and provides services driven by that information that measurably improve machinery availability and efficiency.

A+ service agreements run on client negotiated durations with a minimum of one year required. These agreements can have any or all of the services listed below as determined jointly with a Dresser-Rand representative:

1. *EASE™* remote condition monitoring
2. *EASE™* routinely scheduled on site condition monitoring with portable analyzers and data acquisition equipment.
3. Dresser-Rand service personnel providing necessary parts and labor on a machinery condition based schedule. Routine hourly based maintenance can also be part of an A+ agreement.
4. Machinery specific major and minor inspections provided by Dresser-Rand and directed by *EASE™* reports and SSM recommendations.
5. Base lining machinery mechanical condition and performance.
6. Initial machinery, process, and maintenance practice audits
7. Control system performance checks

Condition monitoring and service contracts can and do come in all shapes and sizes. Dresser-Rand’s A+ team and *EASE™* program can and will be custom fit to best provide each client with a cost effective service agreement that out performs anything in the market today.
