Firebase Realtime Database   iOS 🤖 </>   ☆ ☆ ☆ ☆ ☆

Store and sync data with our NoSQL cloud database. Data is synced across all clients in realtime, and remains available when your app goes offline.

The Firebase Realtime Database is a cloud-hosted database. Data is stored as JSON and synchronized in realtime to every connected client. When you build cross-platform apps with our iOS, Android, and JavaScript SDKs, all of your clients share one Realtime Database instance and automatically receive updates with the newest data.

🔥 Database

Key capabilities

Realtime	Instead of typical HTTP requests, the Firebase Realtime Database uses data synchronization —every time data changes, any connected device receives that update within milliseconds. Provide collaborative and immersive experiences without thinking about networking code.
