Offers iPad App

kernel helps you analyze insights and trends across your customers in healthcare, payer and patient advocacy organizations, in real-time.

Since we launched kernel, a recurring request from our customers is the ability for MSLs to enter thought leader feedback without Internet access (for example,

kernel helps you analyze insights and trends across your customers in healthcare, payer and patient advocacy organizations, in real-time.

Since we launched kernel, a recurring request from our customers is the ability for MSLs to enter thought leader feedback without Internet access (for example, while on an airplane returning from a medical congress).

Our new app lets your field medical colleagues:

- * Record feedback and insights from thought leaders and medical congresses
- * View active topics and questions for their teams
- * View historical customer feedback and field insights

No Internet access is necessary. kernel will save data on your device and send once your Internet access is restored.

Note: this app only works for existing kernel customers. For sales inquiries, please visit www.gokernel.com.

“We believe the best way for Medical Affairs to demonstrate value is to identify and share medical insights and trends which result in meaningful outcomes for the organization, customers and patients.”
