

## Evidence-based Rehabilitation Programs

Our rehabilitation team uses an outcomes-based clinical model of care to direct therapy treatment. All patients and residents receive a thorough evaluation for potential therapy services to help them adapt and compensate for function that may have been lost or dormant. For short term patients, our therapy team works towards the goal of full restoration of lost function, and at all levels, our therapy services use a proven program to help ensure all patients receive consistent, high quality, customized care.

Reliant is a leading provider of physical, occupational and speech therapy services to skilled nursing facilities.

Partnering with providers  
to help patients get  
more out of life
