Mobile and Tablet

Get Paid Anywhere

As mobile technologies advance, we recognize the need to manage and accept payments on your mobile device. EBizCharge Mobile Solutions are designed with one simple goal in mind: to enable merchants to process payments wherever business can take them!

All of the mobile devices we market are powered by our payment gateway, EBizCharge, and feature end-to-end (E2E) encryption and tokenization. You can rest assured that your transactions will qualify with exactly the same security level as if you ran them from your office. All transactions are processed through our virtual payment gateway and reports are available when you log in to your EBizCharge gateway dashboard.

EBizCharge for mobile offers both physical payment processing jacks for phones and tablets as well as the EBizCharge App for seamless and efficient payment acceptance.

Accept payments on your Android mobile or tablet device quickly and securely.

QuickBooks

Process Payments Directly in QuickBooks

Accepting payments is simple, secure, and cost-effective with EBizCharge for QuickBooks payment solution.

EBizCharge for QuickBooks payment solution is native to your QuickBooks program, so there is minimal training time, no hassle, and no third-party popup. Our proprietary payment gateway integrates seamlessly with QuickBooks and adheres to all PCI compliance guidelines, utilizing tokenization technology for the best possible data security.

Frequently Asked Questions

What makes EBizCharge different from other integrations?

Unlike most other integrated processing solutions for QuickBooks, the EBizCharge solution is all-encompassing and not a third-party intermediary between QuickBooks and an outside payment gateway. EBizCharge integrates directly into your QuickBooks program, processing credit card payments seamlessly. When you log into EBizCharge to check your daily batch, you'll find you can view batches in real time and compile pre-populated reports or customize reports with just a few clicks.

Is the payment integration secure?

Yes. EBizCharge utilizes the latest in payment security and fully meets rigorous specifications set by the Payment Card Industry (PCI). Encryption and Tokenization prevents card information from being stored in its original format, drastically reducing legal and financial liabilities.

What is the installation process like?

Installation and training are completely free. Installation only takes on average 1-2 hours and can be done at anytime most convenient for your business.

What support options do you provide?

We back up our solutions with a strong U.S. based in-house support team that's available to you 24/7 at no extra charge. We also provide a complementary Chargeback Management team and Relationship Manager as your personal point of contact.

How much does it cost?

Please contact us for pricing and a free cost savings analysis. We guarantee the software will save you money on processing costs.

How can I get a demo?

The demos are between 10-30 minutes. To get a free, no obligation demo of our EBizCharge for QuickBooks Solution please contact us by filling out a form.

Payment Security

EBizCharge ensures safety, security, and fraud protection with every transaction.

PCI Compliance

EBizCharge is dedicated to securing the sensitive digital elements that fuel payment acceptance. By combining multi-layered security screening and proactive account monitoring, with the latest tokenization and encryption technologies, EBizCharge continues on the forefront in preventing cyber fraud.

Third-Party Security Scanners/Assessors

EBizCharge uses multiple third-party security companies to ensure that our security is always meeting the strictest of industry security standards. Every security assessor working with EBizCharge provides a seal for our clients to view our certification for meeting security standards.

Transport Layer Security (TLS)

All of EBizCharges communications and processing occur through Transport Layer Security (TLS). TLS ensures privacy between communicating applications and their users on the Internet. To ensure the highest level of security, EBizCharge uses a 2048-bit RSA key and does not support cyphers known to be weak or vulnerable.

Identification Through Secure Source Keys

Each Merchant toolkit communicates with the gateway using a unique high-bit encrypted string called a Key. When information is sent to the gateway, the Key identifies not only the merchant, but also the specific toolkit from which the information originated. It also provides the opportunity for merchants to use separate Keys for each individual toolkit. Merchants can also revoke a Key if they notice that it is being misused.

Fraud Prevention

The EBizCharge Fraud Stopper is built on a Module Stack Design. Each module controls a different aspect of security and merchants can choose which modules to include in the fraud control stack. Some examples of modules include: duplicate transaction control, block by country, block by IP address, and many more. The Module Stack Design provides the opportunity for merchants to add or change their fraud modules depending on their unique security needs. EBizCharge is always adding new fraud modules to the Fraud Stopper to keep our merchants up to date with the latest fraud security. Fraud Stopper also allows merchants to apply different fraud settings to different Keys or Sources. For example, a merchant may wish to implement a high level of fraud control for an online shopping cart, but a lower level on the console for their own employees.

Storing Credit Cards the Secure Way

EBizCharge realizes that the theft of lists or databases in which credit card information is stored can have dire consequences for merchants and their customers. With this in mind, we have developed a revolutionary new way of storing credit card information.

In the EBizCharge system, each credit card number is stored individually, making it impossible to steal an entire list or database full of sensitive data. Credit card numbers can only be viewed on an individual basis by unlocking or decrypting each one. If a card number is needed, the requested number is decrypted and unparsed from the system, a process that takes only a few seconds.

EBizCharge's non-database system provides the highest possible level of security for credit card data storage.

Payment Gateway

Accept Payments Online.

EBizCharge is a feature rich payment gateway designed to reduce payment processing costs, increase operational efficiency, and save valuable time.

Convenient Payment Acceptance

Accept credit, debit, and ACH payments easily from anywhere.

Easy Integration

EBizCharge Payment Gateway integrates with most ERP/accounting systems, online shopping carts, point-of-sale systems and mobile devices.

Encryption and Tokenization

Stores sensitive customer card data on PCI-compliant servers and uses data encryption and tokenization technology for maximum transaction security.

Simple To Use Interface

EBizCharge offers an easy to use interface, allowing merchants to quickly and securely process online payments.

Excellent Reporting Features

Access to unlimited transaction history and customizable reports with over 45 different search criteria.

Reduced Processing Costs

EBizCharge Payment Gateway maximizes interchange discounts and ensures that cards qualify at the lowest rates, guaranteeing cost savings.

Description Comparison Integrations FAQs

Simplify Payment Acceptance

EBizCharge Payment Gateway provides merchants enhanced data security levels for sensitive credit card data.
